Project Highlights

Engagement Details

- Project Duration: Ongoing for 5 years
- Standardized Consulting & Validation Package
- QA Teams: 7 Testers + 1 Delivery Manager

Delivery Model

- Managed Services (Offshore)
- Tools Used– JIRA, Google Drive, Pinger, Salesforce tool, mobile devices

Business Values Delivered

- Critical production bugs such as those for News were raised and resolved
- Unbiased objective QA assessment of the product
- Gave rise to a 40% cost reduction

Aol. – Online Consumer Products and Media

Background

- AlienVault provides cyber security software to small and mid-sized businesses.
- They have over a \$100m of funding and are based out of Austin.
- They use the SAAS business model to market and sell its products online.
- They wanted dedicated QA resources to test the ongoing development of its website, CRM and Marketo integrations, their own free APIs and automate the regression test suites.
- In absence of QA, important leads were possibly being lost from CRM and Marketo. Also with the bugs in the Free Tools built using their own API, sales were potentially getting affected.

Solution

- QAonCloud's QA architect studied the customer's web and API requirements and devised the appropriate QA solution
- QAonCloud hired 2 offshore testers and trained them within 2 weeks. A delivery manager was also assigned.
- Wrote 848 test cases for 12 modules consisting of 85 pages. Of these , 104 i.e. 56% major bugs and 21% major & minor bugs were found.
- Automated 70% of test cases using selenium and Java.
- Met the bug acceptance rate SLA of 90%

Achievement

- Sales and Marketing teams gave positive feedback to the Engineering team post QA. They were no longer concerned that important leads may get lost.
- Automation Test scripts reduced web based regression test time by 5 folds.
- API automation scripts improved productivity by 15 times.
- 56% major bugs found
- Team size increased after a year i.e. Jul 2016 onwards.
- 97% of the bugs raised were accepted, while the SLA was 90%
