Project Highlights

Engagement Details

- Project Duration: Ongoing since July, 2018
- QA Teams: 1 Senior & 1 Junior testers + 1 Delivery Manager + 1 QA Architect

Delivery Model

- Managed Services (Offshore)
- Tools Used– JIRA, Google Drive, Slack, mobile devices.

Business Values Delivered

- Helped them to uncover many design issues.
- 21% bugs found and QA clear for every development cycle

Connectworxs, Collaboration tool, Web App

Background

Connectworxs is a team collaboration web tool that unlocks collective intelligence to drive smarter business decisions within an organization.

- Connectworxs provides a scalable platform to understand teams' goals better, challenge their assumptions, iterate around hypotheses, drive critical thinking and challenge into teams, as well as enabling wide spread learning of successes, failures and future requirements, and devise the appropriate QA solution.

Solution

- QAonCloud hired 2 full-time offshore testers and trained them within 2 weeks. A delivery manager was also assigned.

Achievement

- In 8 weeks, wrote 526 test cases for 11 modules consisting of 50 pages.
- Of these, there were 41 major bugs and 67 minor bugs and the total bug count was 108.
- The reported bugs uncovered many design issues. It also helped them to prioritize their work for sprints around the reported bugs.
- We also helped them in testing their marketing website.
- They also want us to do performance and load testing. They would also like us to help them with automated testing.
