

Web and Mobile App testing
company for startups and SMEs

prompto

CASE STUDY

QAonCloud helps Prompto deliver flawless 3D real estate virtual tour application that provides a personal real estate experience for their customers.

The Challenge

Lack of dedicated QA team resulted in obvious bugs that hinders the user experience.

Prompto applies virtual reality to the real estate companies. They have multiple platforms that help the customers in selling their units. The Prompto 360° platform is a package which helps to manage the 360° virtual tours. The Prompto Showcase is another feature that gives a beautiful presentation of the project with the unit images, videos or virtual tours. The Prompto Content platform helps the customers to create all their images, documents and other content.

Having multiple platforms with a variety of features, Prompto wanted a QA service provider with a product mind-set that has an excellent QA process to take the total ownership of delivering the QA independently and give an unbiased assessment. Prompto's desktop and web application require a complete end-to-end functional testing in a way the end-users would use it, thus helping them to get the customer issues resolved at early stages.

"QAonCloud is a great addition to our team, helping us out with testing and maintaining the quality of our product. They are very flexible and adapted to our processes and tools. They are very rigorous during the testing process, pay development team if something is unclear."

- Dan Depaepe
Chief Technology Officer,
Prompto

ABOUT PROMPTO

Prompto is the market leader in Real Estate 3D and Virtual Reality solutions, based in Ghent Belgium. Prompto VR platform help real estate sales team connect with their remote prospects better with 360° virtual tours, e-signatures, QR code information sharing and other cutting-edge smart features.

The Solution

QAonCloud cognizant of Prompto's requirements, performed thorough Functional testing to detect all application defects.

QAonCloud studied the customer's product requirements and devised the appropriate QA strategy. For this project, QAonCloud assigned one dedicated offshore tester and a delivery manager. Effective communication through regular calls with the customer helped in understanding the application and the development process.

Since the project deals with high resolution images and videos, the main challenge was the high-end system requirements with specific graphic card for a better rendering of the images. QAonCloud has provided a dedicated and secured high-end desktops with uninterrupted internet facility to our team.

The existing test cases were updated according to the change of requirements and created new test cases for additional features. QAonCloud also suggested couple of features that could bring-in value add to the product. The regression cycles before every release contributed to the prevention of the major issues.

Our QA process and regular functional validations helped to ensure a consistent quality end product.

This is an ongoing project from the past 14 months. Tools used to achieve customer deliverables-
JIRA for Bug Tracker

- Confluence for Reporting
- Zephyr for Test cases
- Slack for Communication

The customer base for Prompto has increased from 3 to 45.

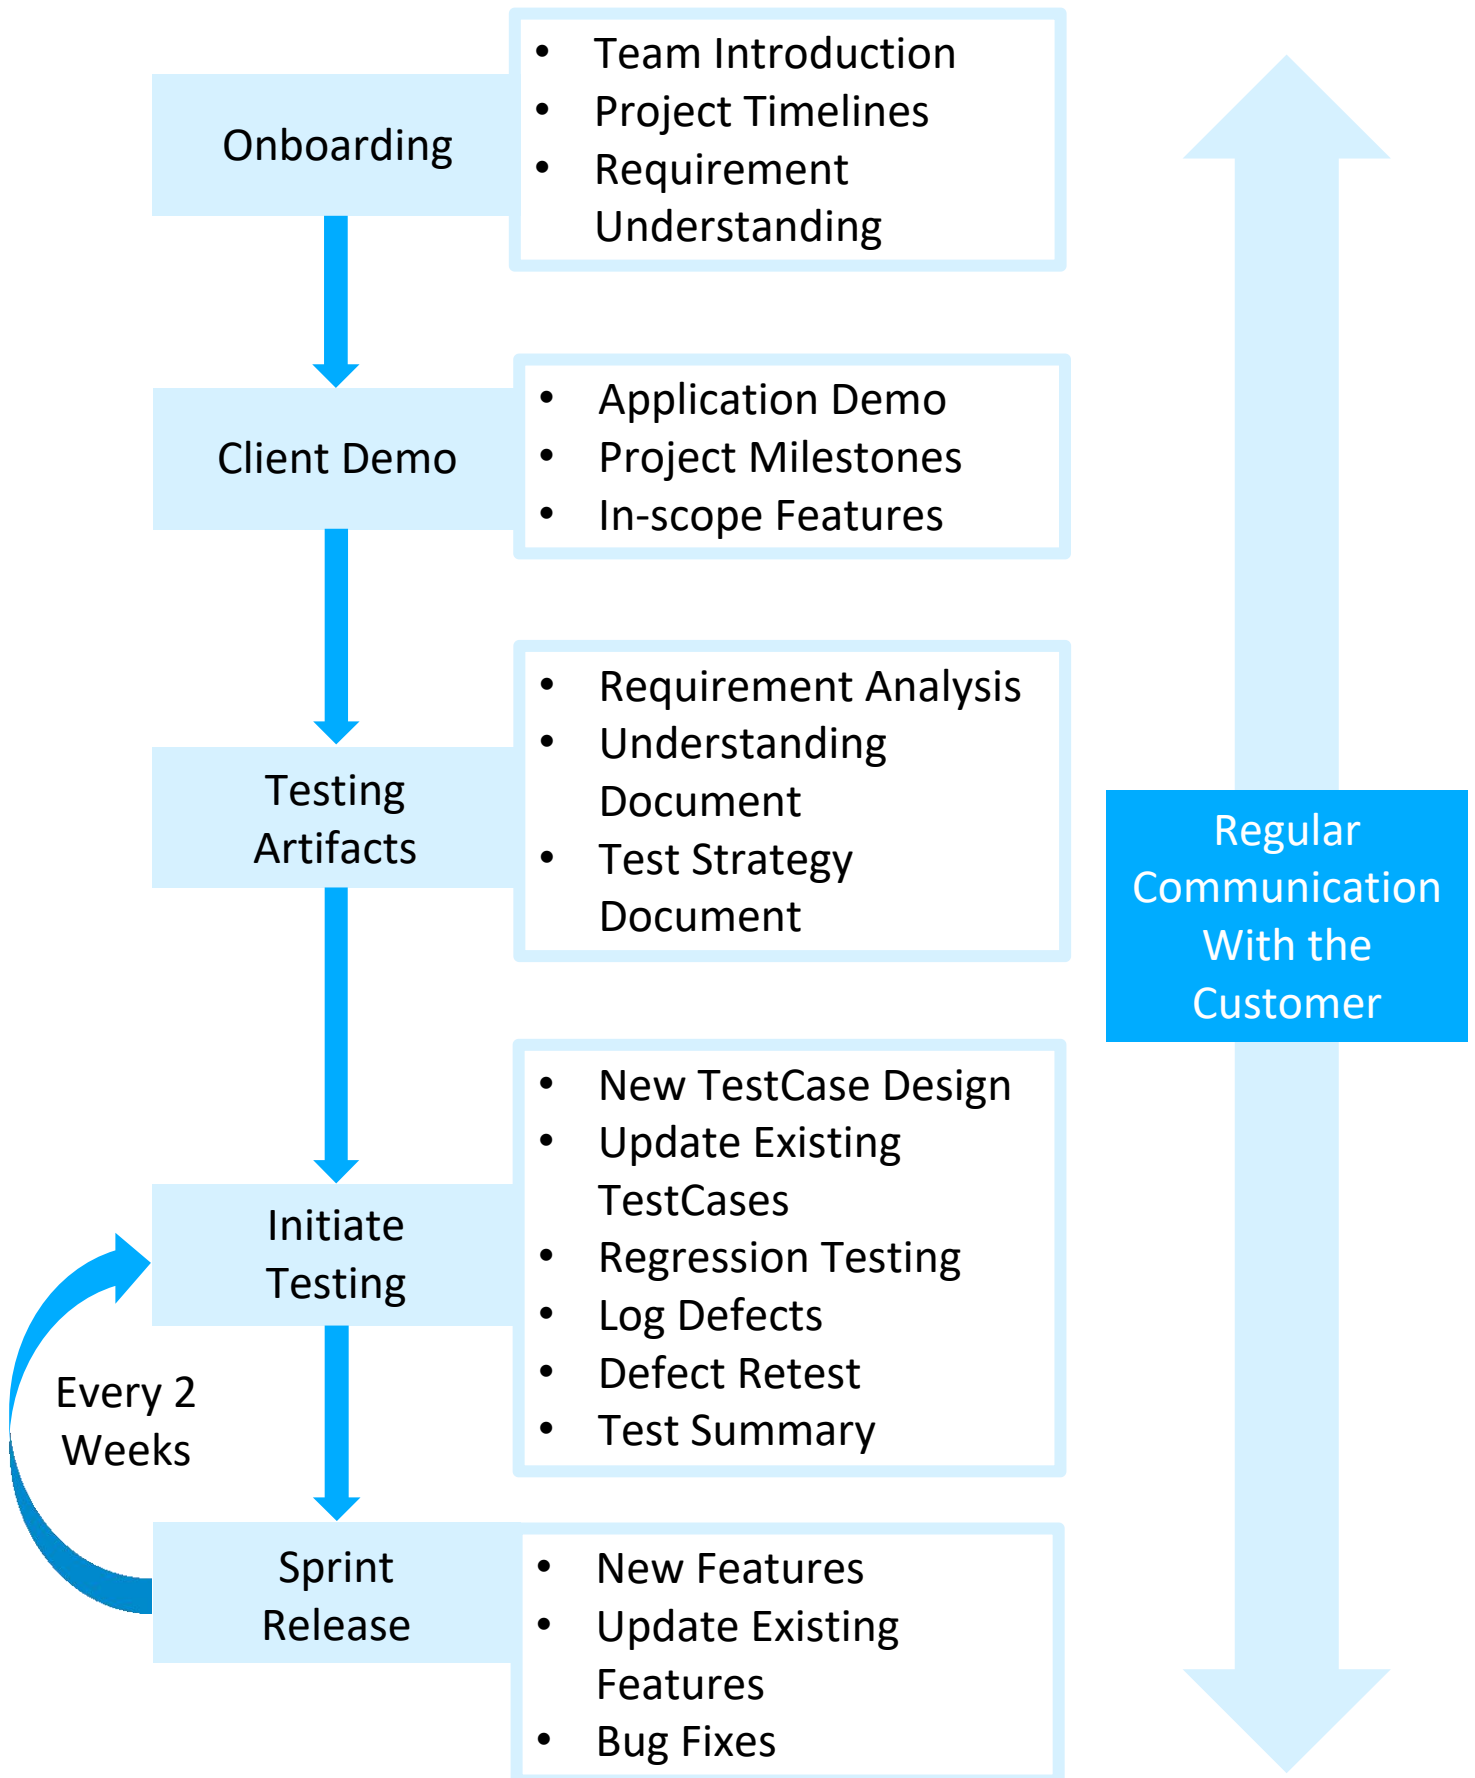

No major issues reported from their clients/customers in the past one year (after the QA engagement)

The Prompto platform has been used to sell over 10.000 units worldwide

Our Process

The Result

Prompto was able to deliver superior virtual experience to real estate customers after rectifying all defects identified by QAonCloud.

With our unbiased and thorough functional testing of the VR application, our client was able to see significant improvement in customer retention and sales conversions. Sales representatives who once experienced frequent application crashes and obvious bugs, have not reported any major defects ever since. Prompto avoided large time and cost investments by outsourcing testing to QAonCloud while gaining access to flexible, world-class QA Team.
