REDBLACKTREE

CASE STUDY

**Agile QA testing for a SaaS based Recruitment
Management System**

REDBLACKTREE

RedBlackTree reached out to QAonCloud for performing a thorough end-to-end testing coverage of their HRMS application, with a focus on QA process setup and regression services

The Challenge

RedBlackTree wanted to build a best-in-class HRMS portal that their customers would use seamlessly. They wanted a QA partner to ensure their application is error-free and well defined.

A Human Resource Management System (HRMS) is a complex system which is critical for internal processes such as Payroll, leave & attendance and employee performance, among others. A HRMS application in order to be well received needs to ensure every aspect of the application is thoroughly tested. With device coverage spanning multiple interdependent devices and systems.

RedBlackTree partnered with QAonCloud to transform their testing process and expand their test coverage. Their main goal was to test product features against defined specifications and create regression test suites for continuous testing.

"QAonCloud has helped us detect app crashes which were affecting our downloads significantly. They have now taken the responsibility of giving a QA clear to all our development sprints. We would like to expand the team further."

- Gautam Chakravarthy,
Engineering Manager,
RedBlackTree

ABOUT REDBLACKTREE

Red Black Tree is a technological product development company that solves challenging technical problems using new age cutting edge solutions including Mobile, IoT, AI/ML and Cloud Technologies. RBT delivers innovative solutions through

The Solution

QAonCloud was able to ensure the test coverage that was needed, explored multiple test scenarios and established a rigorous testing process for RedBlackTree

QAonCloud extensively studied RBT's product requirements and designed a detailed QA solution for the SaaS-based Human Resource management system. QAonCloud acted as RBT's QA team, providing valuable insights and ensuring all defects are uncovered on a daily basis.

Our testing team reported a large variety of bugs, such as log-in issues, crashes and errors, with much needed flexibility and agility, allowing the client to resolve issues quickly and efficiently.

By creating regression test suites, the team was able to test the core functionalities for several releases and ensure the application remains defect-free.

A dedicated delivery manager was assigned to handle and supervise the QA solution testing process for RBT. With our close collaboration, RBT's team received feedbacks and valuable insights from the detail-oriented bug reporting on a regular basis.

In the scope of the project the following tools were used-

- Mantis bug tracker for recording defects
- Asana to track the progression of the development process and updates
- Google Drive to store project-related files

Our Process

The Result

Beyond a service provider, RedBlackTree considers QAonCloud as a strategic provider by helping them ensure best quality possible and make more confident releases

Since the beginning of the engagement, RBT has seen significant improvements in the testing process and delivery results. Our flexible and supportive approach allowed to make quick turnarounds and bring the highest quality SaaS based HRMS product to the market.
