Project Highlights

Engagement Details

- Project Duration: 24 weeks, 180 Developer days
- Project Size: 45 story points
- QA Teams: 3 QA's +1 Delivery Manager+1 QA Consultant

Delivery Model

- Managed Services (Offshore)
- Tools Used– JIRA bug tracker, Testopia Testcase Management tool, Android Studio, Charles Proxy, Slack Communication tool & Google Drive

Business Values Delivered

- Unbiased objective QA assessment of the product
- 20% requirement bugs found
- 50% more bugs found than alternative
- Streamlined Engineering Process

Stabilitas, Web & Mobile

Background

- Stabilitas uses AI to help our customers *prepare for and respond to* physical risks. We provide a turn-key risk management solution for firms, governments, NGOs, and universities.
- Stabilitas wanted a QA service provider
- With a product mindset for their Stabilitas
- Well versed in Agile Testing
- Who would take total ownership of delivering the QA independently and give an unbiased assessment

Solution

- QAonCloud studied Stabilitas's product requirements and devised the appropriate QA solution
- Hired 3 offshore testers using the Aptitude Test specified by Stabilitas and trained them within 2 weeks. A delivery manager was also assigned
- Delivered test cases, bug reports and an analytics report
- Out of the 354 test cases written, 842 bugs were found of which 45% were major
- Met the bug acceptance rate SLA of 90%

Achievement

- 2 testers scored above 90% and one scored 100% in the Stabilitas aptitude test, where 80% was the required score
- 20% requirements bugs were found which significantly improved product development at an early stage
- 96% of the bugs raised were accepted, while the SLA was 90%
- On time delivery of the product by being an equally responsible member of the product team
