CASE STUDY

Functional and Regression Testing for an innovative online
event management solution

Venzi leveraged QAonCloud's functional testing expertise to enhance quality of their virtual event software on different devices and platforms. Our timely and diligent regression tests ensures seamless online event experiences for our partner's clients

The Challenge

To establish a QA process, ensure comprehensive test coverage of the event management platform, and perform rigorous regression tests before every event.

With our proven expertise in delivering software quality assurance, our client selected QAonCloud to perform thorough test coverage of their application and execute regression tests. Since the client did not have an in-house testing team, the QA process had to be established.

Venzi is a dynamic online event planning and management platform with cutting-edge features for attendee experience, pre-event and post-event management, and analytics dashboards. The client's need was to ensure the application worked seamlessly at admin, agent/partner, and attendee levels across popular devices and platforms.

Prior to commencement of each event in Venzi's platform, our team performs regression tests to validate application's accuracy, interoperability, and performance.

"Thank you for all the time you have taken off our hands for testing our growing product and doing it well. We had been feeling the need for a good QA team for a while when you stepped in and we appreciate all the attention to detail and promptness of response."

- Pratyush Singh
Cofounder, Venzi

ABOUT VENZI

Venzi is an end-to-end virtual event management software. The platform provides cutting-edge solutions at every stage of the event journey such as speaker onboarding, virtual exhibitions, Networking, workshops, gamification, lead generation, and more.

The Solution

QAonCloud performed a comprehensive end-to-end functional and regression tests to ensure a seamless in-event customer experience.

Working with QAonCloud, Venzi significantly reduced the risk of uncovering software bugs on their platform during online event sessions. Our engagement with Venzi started by gathering business requirements and conceptualizing pre-test artifacts to ensure full test coverage of the core features and traceability of the test cases. For features that lacked proper documentation, our team performed exploratory testing to discover requirements.

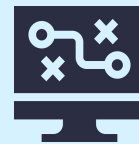

In order to test Venzi's online event platform comprehensively, QAonCloud testing team understood the product in-depth and meted out an exhaustive testing strategy. To date, we have achieved the test objective of 100% coverage of features at every user level-Super Admin, Admin and User. The QA team tested the application on different browsers and devices (mobile and desktop) to ensure interoperability. Our team accomplished a defect acceptance ratio of 99%.

The team identified the set of test cases needed for retesting the core flow features before

every event to ensure a bug-free event experience.

Airtable is used for reporting defects and tracking bug status. We use Google products for regular team communication and document sharing.

SOLUTION HIGHLIGHTS

End to end functional testing

Cross Browser and Cross Device Testing

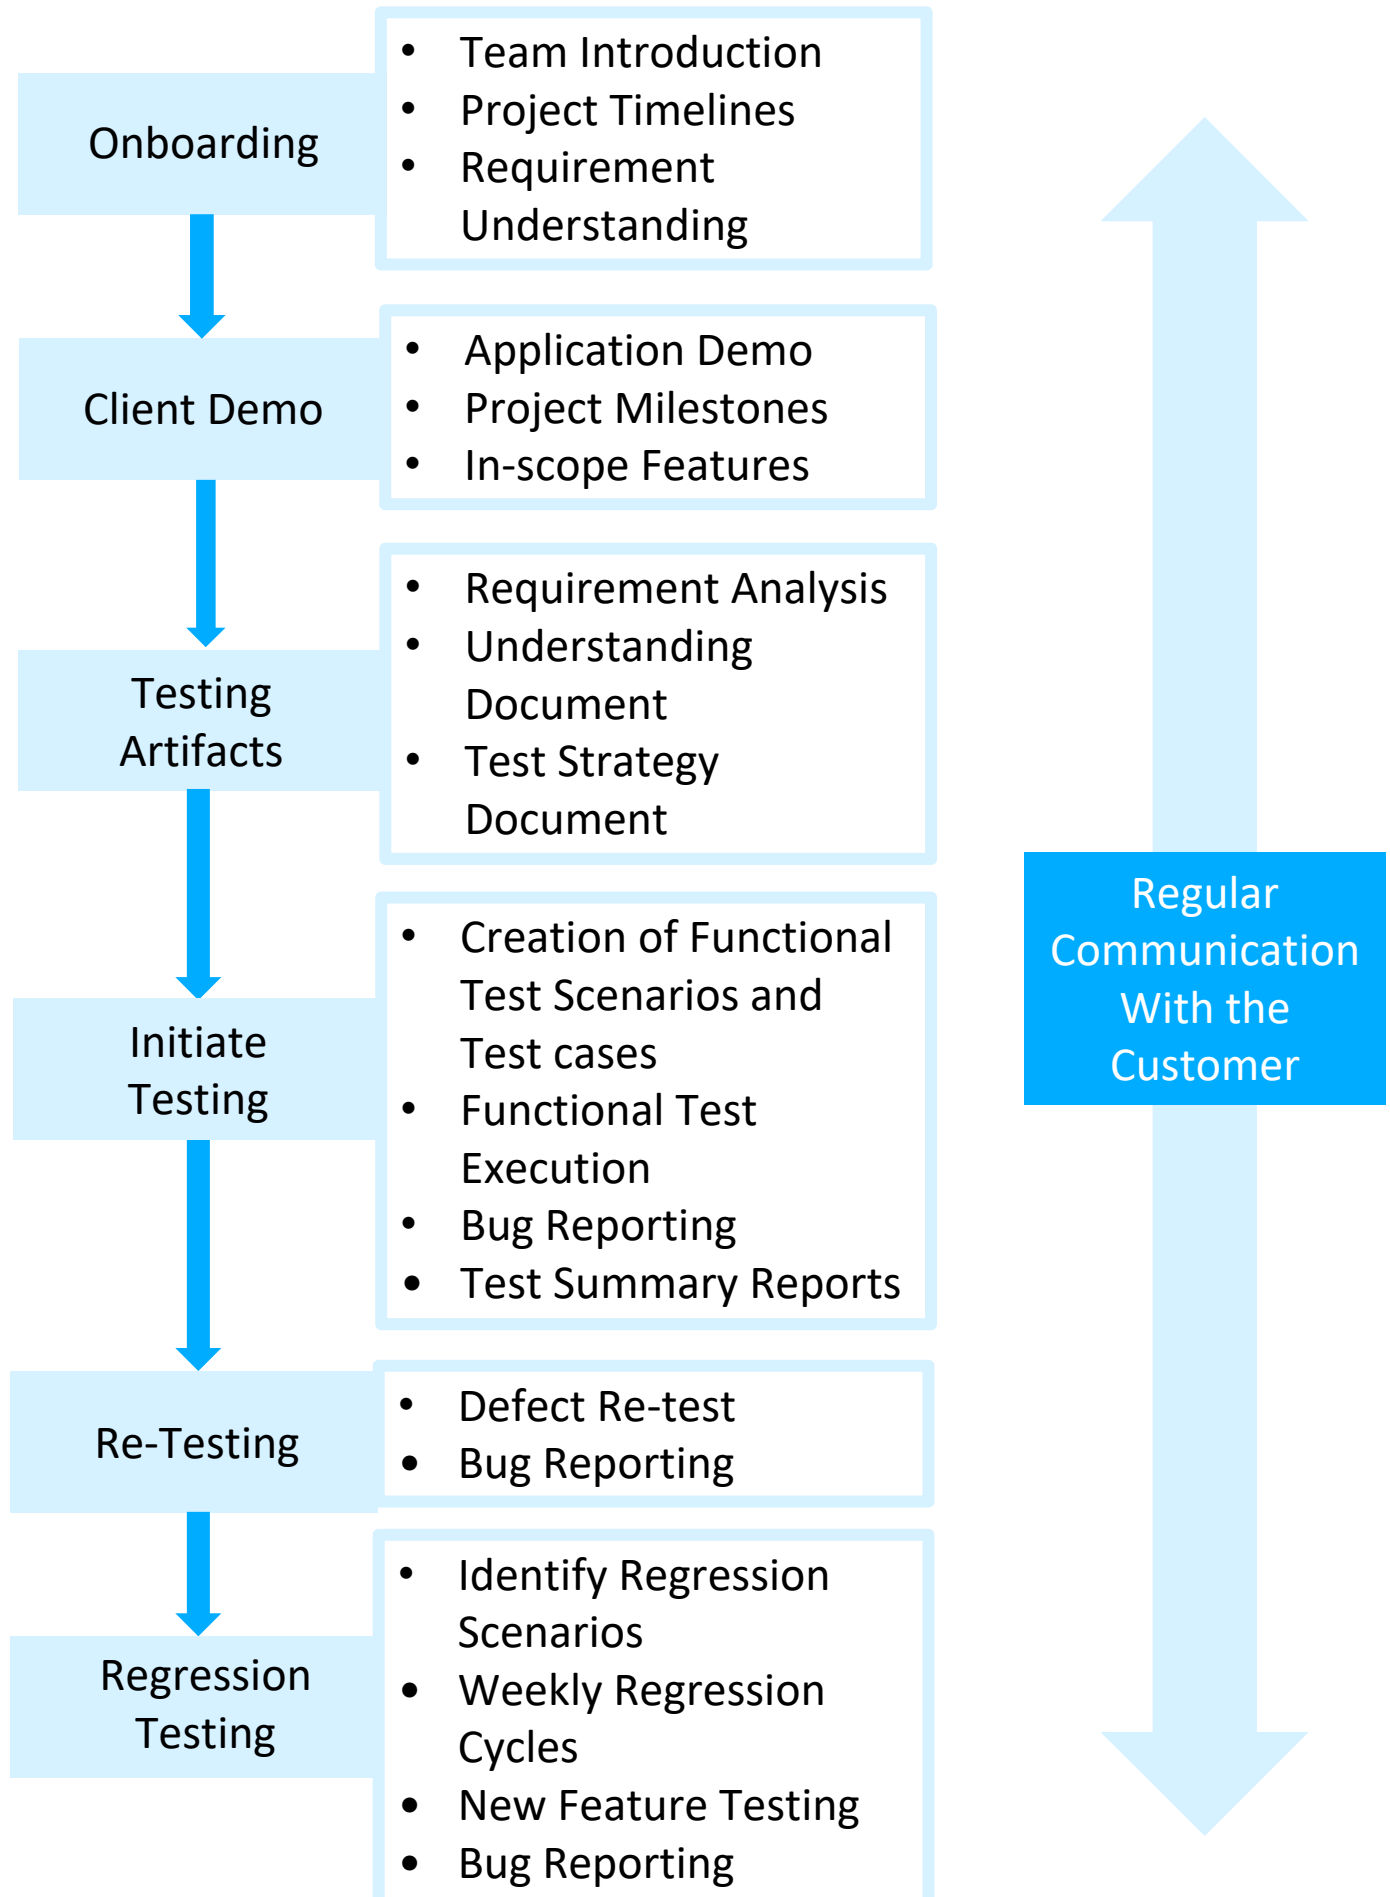

Exploratory Testing

Regression Testing

Our Process

The Result

We have delivered tremendous benefits to Venzi by improving software quality while significantly reducing test effort and time.

Our meticulous approach and attention to detail right from the initial engagement uncovered many defects within a few weeks. We significantly reduced the time required for regression testing and relieved internal team to focus on development. QAonCloud continues to engage with Venzi to ensure every online event conducted on their platform goes smoothly and provide their customers get the best in-event experience possible.
