

N. Sunil || Senior Test Engineer

E-mail: nsunil.itgapte@gmail.com

Phone: 9390879212

Professional Summary

- Having **6.7** years of extensive experience as **Performance Test Engineer (Performance Testing & Performance Engineering)** with **LoadRunner, Apache Jmeter**. Having Experience into **APM tools** Like **App Dynamics, Dynatrace, New Relic, Grafana, and JProfiler**.
- Experienced in requirement gathering, preparing **test plans**, strategizing performance test projects, developing **workload models**, defining **test cases**, developing and maintaining **test scripts** as per the business specifications, **test execution** and **analysis**, report publishing and providing tuning recommendations.
- Having experience on **End to End** Performance Testing Life Cycle Activities.
- Good Experience in STLC and Performance Testing Life Cycle.
- Good experience on **Web(Http/Html) & Web services** protocol.
- Tailored the test scripts with C-functions and protocol based functions in VuGen.
- Good at customization in **JMeter scripts** with **Regular expressions, CSV files** and **Assertions** and Inserted different think times in JMeter script to simulate real user behaviour.
- Enhanced the Load Runner Scripts handling by inserting checkpoints, rendezvous points, parameterization, correlation and error.
- Done various script customizations like dynamic boundary handling, Array merging and Dynamic item data.
- Design and execute multiple test scenarios according to the test plan specifications to achieve forecasted performance **SLA's**.
- Good experience in Load testing, Stress testing, Endurance testing, Spike testing, Scalability testing, Baseline Testing, Benchmark Testing.
- Configure and Analyse various Listeners and identify the performance issues with **hits/sec, throughput, response times** and **TPS**.
- Good at analysing various **Server system parameters** like **CPU** and **Memory analysis** by using **PERFMON** and **LINUX** monitoring. Configure **application server** level performance metrics like **JVM, JDBC, and GC statistics**.
- Good understanding of performance engineering and tuning techniques – **Garbage Collection, Thread Dumps & Heap dumps**.
- Good experience on analyzing java application CPU/Memory profiles and analyzing the thread dumps.
- JVM performance tuning techniques.

- Good at identifying and analysing **App server issues** with **JProfiler** and **App Dynamics**.
- Experience in generating **AWR** Reports and Identifying Performance Bottlenecks in Database.
- Knowledge in Route cause analysis of DB server by using SQL profiler and provide observations to the respective DB team.
- Expertise in providing the Test Results Summary report.
- Implementing **DevOps solutions** and **CI/CD** pipelines.
- Good experience in understanding the cloud infrastructure wrt **AWS, AZURE** Cloud performance engineering.
- Good at identifying various **bottlenecks** and **Route cause analysis to fix issues**.
- Good commitment, result oriented, with a quest and zeal to learn new technologies.

Work History

- Worked as a **Test Engineer** in **ROOTS SYSTEMS PRIVATE LIMITED, Chennai** from 21st March 2017 to 30th April 2020.
- Currently Working as **Senior Test Engineer** in **VALLEY INFOSYSTEMS PRIVATE LIMITED, Bangalore** from 11th May 2020 to Till now.

Qualification

- **B. Tech (CSE)** from **JNTUH University, Warangal** in **2012**(Telangana).

SKILL SET

Performance Testing Tool	JMeter, HP Loadrunner
Monitoring & Profiling Tools	New Relic, Splunk, JProfiler, AppDynamics, Dynatrace, VisualVM, Grafana
Programming Languages	Core Java, C language
Operating System	Window XP/7/8/10, UNIX, SOLARIS
Bug Tracking Tools	TFS, JIRA
Application Servers	Web logic, Tomcat, Jboss
Database	Oracle, SQL server
Web Servers	Apache, Jakarta-tomcat
Cloud Technologies	AWS, Azure
DevOps tools	Git, Jenkins, Docker, Kubernetes
MS-Suite	MS-Word, MS Excel, MS PowerPoint, MS Outlook

Projects

Project#1

Project Name : Mohawk OASIS Support
Client : Mohawk, US
Tools Used : HP LoadRunner, AppDynamics
Project Duration : April 2022 to Till now

Project's Description:

Client Description: Mohawk sells floor covering and textiles for every room in the home and for every commercial application. Hardwood flooring, laminate flooring, ceramic tile flooring, stone and marble flooring and, via an exclusive distribution agreement with Congoleum, vinyl sheet flooring are among the newest Mohawk product offerings. What's more, the company now offers woven bedspreads, tapestries, pillows, throws and window blinds. Mohawk products are found in major retailers across the country and the world.

Project Description: Mohawk is a leading flooring company based out of US. The company sells flooring products to its Customers. They maintain stores at various geographical locations in US. Orders are taken through these stores and the orders are then fulfilled either immediately or shipped to the Customer's address based on Customer's need basis. They use a Yantra based customized application for achieving this.

OASIS is a Yantra based desktop application and initial call will be made from executable file. Rest of the communication will be happen through http protocol. Mohawk has embarked the performance testing initiative for the OASIS application to check the scalability and stability of the system.

Responsibilities:

- Gathering Client Requirements for Performance Testing.
- Design the test scripts for all the business scenarios based on the Client Specifications.
- Define performance testing objective, scope, effort estimation, resource loading and timelines.
- Creating master test plan and detailed test plan with approach.
- Create the LR Scripts based on the Client specifications.
- Enhancing the scripts with respect to Correlation, Parameterization.....etc.
- Perform Load Testing, Peak Load Testing, Stress Testing and Soak Testing.
- Executed Endurance test to find out the Bottlenecks.
- Simulate the real user behavior by inserting think time and pace time.
 - Running and Monitoring the Controller Scenarios.
- Analyzing and Reporting the Performance Test Results.

Project#2

Project Name	: Banking Information Solutions
Client	: Cheaha Bank, Alabama
Tools Used	: JMeter, Dynatrace, Splunk
Environment	: Java, Jsp, HTML, Servlets, WebLogic
Project Duration	: May 2020 to March 2022

Project's Description:

Description: The bank is capable of providing all of your banking needs, whether large or small. We have the modern technology of internet banking, 24-hour telephone banking and ATM/Debit card access, yet we are committed to providing personal and friendly customer service within our local bank office. The bank offers several options for checking, savings and money market accounts, as well as Individual Retirement Accounts and Certificates of Deposit. We also offer a variety of loans, ranging from small personal loans to real estate loans and large commercial loans with competitive interest rates.

Responsibilities:

- Involved and Analyzed in getting Non-Functional Requirements by having an interaction with client.
- Prepared required documents for test scenarios and test plan.
- Perform Performance testing of the applications by generating scripts using LoadRunner web (HTTP/HTML) protocol.
- Expertise in correlation, parameterization, page validation and error handling and Good at string and file operations.
- Design and carried out the test with expected volumetric to meet performance goals and objectives.
- Analyzed the scenario results with good interpretation by including various client side metrics like Load, Hits/sec, RT, Throughput, TPS rate with detail graphs.
- Analysed various Server system parameters like CPU analysis and RAM analysis by using PERFMON.
- Ran SQL Profiler to drill down the major performance issues at query level by optimizing with Indexes
- Produced the performance test reports including client side and server side metrics.

Project#3

Project Name	- Hospital Information System
Client	- Catholic Health Services, US
Environment	- Java
Project Duration	- June 2019 to April 2020
Tools used	- Jmeter

Project's Description:

Application includes Help Desk, Registration, Outpatient, Inpatient, Services, Laboratory, Pharmacy; the main aim of this Project is to provide comprehensive and complete solution to the Hospital Management. This Employee information and Billing modules Help Desk provides information regarding to the doctor appointments, Services module provides info about available services. Laboratory provides status of tests, Updated pharmacy info is maintained in

pharmacy module, and Employees information and their salary details are maintained in payroll. There is a search facility within the existing records based on several criteria like patient's ID, first name, last name and date.

Responsibilities:

- Involved and Analyzed in getting Non-Functional Requirements by having an interaction with client.
- Prepared required documents for test scenarios and test plan.
- Perform Performance testing of the applications by generating scripts using LoadRunner web (HTTP/HTML) protocol.
- Expertise in correlation, parameterization, page validation and error handling and Good at string and file operations.
- Design and carried out the test with expected volumetric to meet performance goals and objectives.
- Analyzed the scenario results with good interpretation by including various client side metrics like Load, Hits/sec, RT, Throughput, TPS rate with detail graphs.
- Analysed various Server system parameters like CPU analysis and RAM analysis by using PERFMON.
- Ran SQL Profiler to drill down the major performance issues at query level by optimizing with Indexes
- Produced the performance test reports including client side and server side metrics.

Project#4

Project Name	- Aircrews, Crew Internet Access (CIA)
Client	- Sabre Travel Technologies
Project duration	- April 2018 to May 2019
Technology	- Java, Oracle
Tools used	- HP Loadrunner, AppDynamics

Project's Description:

Aircrews is a desktop application, which is used for admin activities like assigning the duties to the crew to the respective flights. It is very vast application as it deals with everything in the airline domain.

CIA is the web application it is integrated with main AIRCREWS console, whatever admin publish in the Aircrews application the crew members can see them in the CIA in which the crew members can check their duties for the particular dates, leave management system, notifications (if any changes made in their duties), and Roster reports. It has lot of modules like leave, Reports, Requests, Crew on flight, Crew in station. Etc Most of the Airlines use this application.

Responsibilities:

- Extensively participated in gathering various requirements which are needed for performance testing with an aid of client.
- Generated the scripts by using Load Runner Web (Http & Html) protocol.
- Design and implemented detailed performance test plan to get an accurate result.

- Prepared the scripts for all noticed key performance business scenarios.
- Enhanced the designed scripts with correlation, parameterization, page verifications and error handling.
- Done sample run to examine the developed scripts on various environments to ensure the accurate test results.
- Executed with load and endurance test to depict application behavior.
- Analyzed various Performance parameters like Load, Response time, Throughput, TPS to validate client side metrics.
- Equated the test environment with production environment to pose real user behavior.
- Submitted the detailed test report by including performance observation.

Project#5

Project Name	- Insurance
Client	- Oman Insurance Company (Dubai)
Project Duration	- May 2017 to March 2018
Tools used	- HP Loadrunner

Project's Description:

Oman Insurance Company, or OIC, is one of the leading insurance solutions providers in the Middle East, headquartered in Dubai, UAE. OIC has 15 branches including the Head Office-Operational Branch and a strong presence in every Emirate in the UAE, the Sultanate of Oman and Qatar.

Responsibilities:

- Involved in preparing performance test scenarios in Controller to reach TPS.
- Good experience in preparing and debugging scripts
- Involved in Web (HTTP/HTML) and Web service Performance Testing.
- Executed different Scenarios (Stress, Load and Soak) based on client needs.
- Monitor graphs using App Dynamics.
- Experience in detailed analysis of performance tests and reports.
- Setting up of performance test environment
