What needs to be done

We are using a plugin called “[Salon booking system](#)” on couple of our WordPress websites and want to integrate it with a payment solution called [Viva Wallet](#).

There are WooCommerce plugins both for the Salon booking system plugin and the payment solution (so it is possible that we could do Salong booking system → WooCommerce → Viva Wallet). However we don't want to take that route because we are complicating it more and also there is still no ISV solution, instead we want to have Salon booking system integrating directly to Viva Wallet (salon booking system → viva wallet). Unfortunately there isn't any integration for Viva Wallet ISV from them so we need your help to create a WordPress plugin that integrates these two.

What is Salon booking system

It is a plugin that we use for allowing users to book time for a service. It looks up schedule of employees and displays open times in their schedule for the user.

A website can choose in Salon booking system settings if they want to allow users to book times and pay later or pay during booking. This integration is for the websites that choose to take payments online.

How it will be done

⚠ You will need to be using Viva Wallets API for ISV, you can find important links about it and WP plugin below in Resources. ISV allows us to implement our fees on top of Viva Wallet's (so that we can take our own fee). It is important to take that into consideration and not integrate Salon Booking System and Viva Wallet some other way.

We have access to a repository of another payment solution how they integrated it with Salon booking system. That can be used to speed up your process and make it simpler for you. You can find the repository called Mollie below in resources.

Functionality

- Options page. Only accessible by website admins
 - Data that is not hardcoded but admins should be able to change easily
 - Viva Wallet: Merchant ID
 - Viva Wallet: Merchant Password (This seems to be merchant API key)
 - Viva Wallet: ISV API key
 - Viva Wallet: ISV amount (our fee)
 - Boolean. Live or test Viva Wallet account functionality
 - In Salon booking system plugin setting within Payment methods display Viva Wallet option.

When a user goes through steps (selecting: services → date/time → staff and filling out their info) they will arrive to the summary page where the user can see everything selected.

There it should be a button saying 'Pay online' (make sure it is translatable) and when clicking on that they will get to pay via Viva Wallet.

Some of the data that we should send over securely to Viva Wallet is:

- Total amount that was shown on summary page
- Currency (that is selected in Salon booking system settings)

- ISV amount (our fee). This is the fee taken from the total amount.

If the payment went through the status should automatically be updated to **paid** in Salong booking system plugin for that booking.

Resources

- Viva Wallet: [Here](#) you can find the API calls you will have to use.
- Salon booking system: [Here](#) you can find API info
- Repository plugin for inspiration: [Mollie ↔ Salong booking system](#)

What we would like to hear from you

- How long would it take your developer to deliver this ?
- If we would like to be able to autoupdate this new plugin, how much more time would it take for that part and what would it cost ?
