

Abinaya Bhuvanakumar

Performance Test Engineer

Good experience in people management and team leadership. In-depth knowledge in performance testing using JMeter and Load Runner. To secure a position in progressive and dynamic work environment that offers opportunity to use my experience and knowledge for strategic decisions, planning and executions inherent in the process of quality assurance in software development lifecycle

📍 Chennai

PROFILE SNAPSHOT

- Over 10 years of experience in information technology industry prevailing in performance testing and engineering. Engaged in full spectrum of PTLC which includes performance testing estimations, test planning, test Design, test execution, test Analysis and presenting comprehensive reports.
- Strong knowledge in load testing tools like JMeter, Load Runner, Gatling. Collaborate with project teams to understand system requirements, gather non-functional requirement and design comprehensive performance test plans.
- Design and develop realistic and scalable performance test scripts and performance test scenarios based on application architecture and business requirements. Write tests based on client requirements using performance testing tools. Collaborate with development and operations teams to ensure accurate representation of production scenarios in test scripts.
- Worked extensively in different types of testing such as load, stress, endurance, spike, volume, fail-over testing. Familiarity with testing API using Postman and Soap-UI. Monitor and analyze test results, identifying performance bottlenecks, and areas for improvement
- Analyze client-side, server-side metrics, conduct root cause analysis of performance issues and work with cross-functional teams to implement solutions. Experience with defect tracking tools like JIRA and continuous integration tools like Jenkins.
- Good knowledge in working with application performance management tools like AppDynamics, Dynatrace to capture and analyze the performance bottlenecks at code level. Collaborate with architects and developers to optimize application code for better performance.
- Coordinated and directed regression testing efforts in an agile sprint-based methodology. Manage and lead team to ensure all business deliverables are completed on time.

TECHNICAL SKILLS

Testing Tools: Load Runner, JMeter, Gatling, Postman

Monitoring Tools: AppDynamics, Dynatrace, Kibana, Red hat OpenShift, Grafana, Performance Center, VisulaVM, Fiddler

Mainframe: TS2(TSYS)

Test Management Tools: Jira, Confluence, Quality Center, Test Rail

CI/CD: Jenkins, Gitlab

Programming Languages: Java, SQL

WORK EXPERIENCE

Senior Consultant

Capgemini Chennai

04/2021 Present,

Key Deliverables

- ▣ Effective communication with developers and product owners throughout the sprint to achieve goals. Create new test scripts for new functions/requirements and integrate to the existing scenarios.
- ▣ Execute and analyze performance tests throughout software development lifecycle (SDLC) Make sure that execution status and results are tracked utilizing the appropriate tools. Document, track, and log defects.
- ▣ Work closely with developers on testing issues/defects. Participate in troubleshooting and triaging of issues with different teams to drive towards root cause identification and resolution.
- ▣ Evaluate system performance establishing baselines and identifying relative change in performance metrics on every build or release basis.

- Participate in status reporting highlighting project progress, key defects, issues, risks and mitigation plan. Maintaining the test artifacts in confluence page.
- Work on initiatives like tools proof of concept, azure cloud, pipeline concepts to create automated performance test suite. Ability to handle multiple tasks, work independently and in a team environment.

WORK EXPERIENCE

Consultant Capgemini Chennai

03/2021 - 07/2018,

Key Deliverables

- Involved in working with business analyst for Nonfunctional requirements gathering country wise for product applications.
- Identifying the test scenarios to validate the performance of key business functions and certifying the NFR requirements. Co- ordination with infra team to setup test environment.
- Create performance test plans and test scripts for key business scenarios. Execute performance tests using Performance center.
- Analyze the App and DB servers resource utilization for any bottlenecks. Deep dive analysis of test results and call out for any discrepancies against NFR.
- Identification of performance defects and tracking them in Jira. Coordination with development and architecture team to help in fixing the identified performance bottlenecks.
- Publish performance analysis reports and conduct review sessions with all the stakeholders. Conducting training sessions for entry level trainee about performance testing process and tools.

WORK EXPERIENCE

Associate - Projects Cognizant Chennai

02/2014 - 06/2018,

Key Deliverables

- Involved in requirement understanding and gathered nonfunctional requirements from the customer for multiple projects.
- Good communication skills and experience of working in self-organizing dynamic teams. Analyzed the requirements and developed the detailed Performance Test Plan with test design parameters, workload distribution & test schedule.
- Worked on creating performance test scripts for in scope scenarios and involved in creating and maintain required data for test execution.
- Execute various test runs like Load, stress, Endurance, Fail-over as per the test plan and gather performance statistics, provide interim report after each test run.
- Evaluate system performance establishing baselines and identifying relative change on a build / release basis
- Co-ordination with onshore for status reporting, highlighting project progress, key defects, issues, risks and mitigation plan.
