

BALAKRISHNA T

Performance Tester

☎ 9908849112

✉ balakrishnapt112@gmail.com

EDUCATION

B. Tech in ECE from Jawaharlal Nehru Technological University, Hyderabad.

WORKING EXPERIENCE

Working for Exolvo Technologies pvt ltd from June 2019.

SKILLS

Testing Tool : Load Runner, Performance Center, JMeter.

Performance Tools : JvisualVM, Dynatrace, App Dynamics.

Protocols : Web HTTP/HTML, Webservices, TruClient.

Monitoring Tools : Perfmon, Site Scope.

Operating systems : Windows, Linux.

Languages : C.

CAREER OBJECTIVE

To enhance professional software quality assurance skills in a challenging project that will allow to apply analytical, documentation and testing skills to make a significant contribution to company's success.

WORK EXPERIENCE

- Having 4.5+ Years of experience in Performance Testing using Load Runner and JMeter.
- Expertise in Performance Testing using Web (Http/Html), Web services, TruClient Web Protocol, SAP/GUI protocol.
- Well exposure on Performance Testing Life Cycle.
- Expertise in enhancing the Load runner scripts using Correlation, Parameterization and Error Handling.
- Generated test scripts and scenario as per the business specifications.
- Involved in different types of tests like Load test, Endurance test, Spike Test, Rendezvous Test etc.
- Experienced in using APM tools like Dynatrace and Appdynamic
- Involved in Analyzing the Test Results and prepare the Test Reports.
- Ability to drill down on results and observe potential performance bottlenecks.
- Analyzed throughput graphs, hits/second graphs, transactions per second graphs etc.
- Demonstrated ability to succeed and learn quickly in challenging environment.
- Flexible and capable of successfully handling multiple projects simultaneously.
- Prepared daily/weekly status reports to provide updates on the assigned work.

PROJECT DETAILS

Project #1:

Title : Application for Shopping

Client : Coggles

Role : Performance Tester

Tools : Load Runner

Description:

Coggles is a premium international fashion retailer home to over 200 men's and women's designer collections from established fashion houses. The intention was to provide a superb store to support their enthusiasm for contemporary fashion. coggles looked to take their expertise to a worldwide audience, with the launch of their website to purchase items through online. Though being a web based store, coggles looks to maintain the standards and professional customer care offered to any coggles shop customer.

Roles & Responsibilities:

Understand the performance test scenarios & use cases

- Perform Performance testing of the applications by generating scripts using Load Runner
- Web (Http & Html) protocol.
- Creating the Load Runner scripts, debugging and enhancement of the scripts by using VuGen.
- Involving in the daily and weekly status meeting with the clients.
- Performed correlation and parameterization and the necessary enhancements
- Performed the baseline, load and stress testing
- Analyzing the performance test results from the client side and server side.
- Involved in Majoring the Performance Metrics such as (CPU, Memory utilization, Response Time, Throughput).
- Involving in preparation of test summery and execution result.
-

Project #2:

Title : Retail Banking System

Client : Active bank, Sweden

Role : Performance Tester

Tools : Load Runner

Description:

This project involves automation of banking system. This includes all modules required for everyday banking. It generates Daily, Weekly, Monthly, Yearly reports. It also generates pattern reports. Transactions involved in this banking system by customers are more reliable and secured. It includes modules namely Accounts, Deposits, Bill payments, loans, Settings, Bank request, Fund transfer, mail box

Roles & Responsibilities:

- Understand the performance test scenarios & use cases
- Perform Performance testing of the applications by generating scripts using Load Runner SAP/GUI protocol.
- Creating the Load Runner scripts, debugging and enhancement of the scripts by using VuGen.
- Involving in the daily and weekly status meeting with the clients.
- Performed parameterization and the necessary enhancements
- Performed the baseline, load and stress testing
- Analyzing the performance test results from the client side and server side.
- Involved in Majoring the Performance Metrics such as (CPU, Memory utilization, Response Time, Throughput).
- Involving in preparation of test summary and execution result.
-

Project #3:

Title : TIAA-CREF

Role : Performances Tester

Tools : Load Runner

Domain : Insurance

Description:

Teachers Insurance and Annuity Association – College Retirement Equities Fund (TIAA–CREF) is a Fortune 100 financial services organization that is the leading retirement provider for people who work in the academic, research, medical and cultural fields. TIAA was life insurance company for providing retirement income for professors through fixed premium guaranteed deferred annuity contracts. CREF was created to allow professors to invest in the stock market through the nation's first variable annuity. Its core business continues to be retirement plan administration and annuity products. At the retail level,

Roles & Responsibilities:

- Understand the technical feasibility with LR
- Understanding Nonfunctional (performance) requirements
- Preparation of Test Strategy, Test plan and work load statistics
- Write the test scripts for business scenarios and customizing the script using C – Language according to requirements
- Conducting test executions Load, stress and endurance test executions
- Monitoring client side and Server-side monitoring
- Prepare the final test report, which includes client side and server-side metrics

Project #4:

Title : E Commerce

Client : Boo Hoo

Role : Performances Tester

Tools : JMETER

Description:

Boo Hoo is an e-commerce application where users can buy wide range of clothing online such as Formal Wear, Casual Wear, Fashion Hear, T-Shirts, Jackets and Sweaters.

Roles & Responsibilities:

- Understanding the business.
- Identifying the Critical Business Transactions.
- Identifying the protocols to be used.
- Creating the Test Scripts using JMeter.
- Customize the script using parameterization and correlation.
- Conducting baseline, load tests and mixed load with multiple scenarios through JMeter.
- Monitored different graphs like transaction response time, hits per Second, throughput, windows resources and database server resources etc.
- Prepare detailed performance Summary Report which includes server side performance metrics.
