Automation

Write Feature Files:

Created BDD Cucumber feature files using the Gherkin syntax, which describes the scenarios in a structured manner. Defined the scenarios, specify the preconditions, and outline the expected behavior using Given-When-Then steps. **Implement**

Step Definitions:

Wrote step definitions in Core Java programming language that match the steps defined in the feature files. Implement the code logic in the step definitions to interact with the system under test.

Execute Tests:

Run the Cucumber tests to execute the defined scenarios against the system under test. Monitor the test execution and observe the results.
