

KOPURI BHARGAVI

TEST ENGINEER

Seeking an opportunity to utilise my talents and get practical experience in the field, I'm an entry-level test engineer with a solid foundation in software testing methodologies and a drive to learn and grow in a fast-paced technological firm.

📍 Chennai

EDUCATION

- **Bachelor of Technology**
Vishnu Institute of Technology
2019-2022
68 % aggregate
- **DIPLOMA**
SMT.B.Seetha Polythenic
2016-2019
75% aggregate
- **SSC**
Viswa Vignan Convent and Talent
School
2015-2016
72% Aggregate

SKILLS & TOOLS

- Jmeter
- NeoLoad
- LoadRunner
- ZAP
- Germlin
- Playwright with Javascript

LANGUAGES

- English
- Hindi
- Telugu

WORK EXPERIENCE

Performance Testing

- Jmeter and LoadRunner tests in Web-based APIs like Regres and Octoperf, using protocols Web HTTP/HTML and TrueClient-Web, and applied these methodologies to Web applications and Check Text checking, Correlation Parameterization, and Error checking
- Running various kinds of tests - Load, Stress, Spike, Endurance, Volume
- Making reports and monitoring application behaviour using several KPIs (Key Execution Pointers) such as Response Time, Hits per Second, Throughput, and other
- Integrated Selenium with OWASP ZAP to automate security testing during functional test execution, improving application vulnerability detection in early development stages.
- Configured ZAP as a proxy to intercept and analyze web traffic generated by Selenium tests, identifying vulnerabilities such as XSS, SQL injection, and other OWASP Top 10 threats.
- Implemented ZAP's REST API to trigger automated security scans as part of the CI/CD pipeline, enhancing the efficiency of DevSecOps practices.
- Analyzed ZAP scan results and collaborated with developers to resolve identified vulnerabilities, reducing the risk of security breaches.
- Documented the integration process

Choas Engineering

- Implemented Choas Engineering experiments using Gremlin to simulate real-world such as CPU spikes, Memory pressure, service outages in staging environment
- Designed and executed failure injection scenarios such as server outages, network latency simulation, and database disruptions to validate system robustness and high availability,
- Monitored system performance and application behavior during choas tests using Datadog dashboards, Alerts and logs.
- Indentified weakness in system reliability and ensured that services met excepted recovery and stability thresholds under failure conditios.
- Documented Choas scenarios ,defined steady-state conditions and ensured minimal risk while improving system realiability and observability
- **Choas Mesh** - Used to conduct trargeted Fault injections with Kubernetes with could -native applications

Certifications

- Jmeter Intro and Pro certificate from BlazeMeter University
- Completed Tricentics academy and Neoload Certification
- Google Associate Cloud Engineer

PROOF - OF - CONCEPTS

- Done POC for Stres Stimulus using Fiddler
- Done POC for k6 Load Testing Tool
