Indra Ganesan college of Engineering
2015 - 2018

About Me

Adept at creating and maintaining test documentation including test cases, test scripts, and test reports and Strong understanding of software development life cycle (SDLC) and testing life cycle (STLC).

Skills

- Java Selenium
- TestNG
- BDD Cucumber
- Postman
- Rest Assured
- Jenkins
- Appium
- JIRA
- Maven
- SQL
- GIT
- Android Studio
- Manual Testing

Karthick Raja G

Software Test Engineer

Work Experience

Hexaware

Jan 2019 - Present

Have **5+ years of Software Testing** Experience in **Mobile Testing, API Testing and Web Application Testing** using tools such as **Java Selenium, Jenkins, Jira, Git, SQL, BDD Cucumber, TestNG, Appium, Postman, Maven, Rest Assured** and Skilled in identifying and documenting software bugs, glitches, and other issues to help improve the software.

Professional Summary

- Proven ability to work with various screen sizes, resolutions, and Android devices.
- Knowledge of iOS app analytics and crash reporting tools.
- Strong understanding of creating assertions in Postman to validate response data, status codes, headers, and other API attributes.
- Proven ability to conduct code reviews for Selenium scripts to ensure quality and adherence to coding standards.
- Proficient in designing test cases for compatibility testing to ensure the application functions across different browsers, devices, and operating systems.
- Experience in providing conflict resolution training to team members, fostering a proactive approach to conflict management.
- Demonstrated ability to articulate bug descriptions clearly and concisely, avoiding ambiguity and providing all necessary information.
- Expertise in configuring Jenkins for compliance with organizational policies and auditing build activities.
- Extensive experience in optimizing Maven builds, minimizing build times and resource utilization.
- Experience in generating and interpreting comprehensive test reports using Cucumber reports.
- Proven ability to configure and manage different testing environments for API testing using Rest Assured

■ Project I - Sietefoods

Domain: ECommerce

May 2021 - Present

Sietefoods.com is the website for Siete Foods, a Mexican-American food brand that makes grain-free and dairy-free products and Siete Foods products are made with wholesome ingredients and are designed to encourage inclusivity around the table. Siete Foods offers a variety of products, including Spicy ketchup and sliders, Buffalo chicken quesadilla Grain free cookie mix, Beans & spice bundle, Sourdough pretzel nuggets, Almond flour tortillas.

■ Skills

- Java Selenium
- BDD Cucumber
- Postman
- Rest Assured
- Jenkins
- Appium
- Android Studio

■ Project II- Kutxabank

Domain: Banking

Jan 2019 - Apr 2021

Kutxabank is a Spanish savings bank. Kutxabank's products include universal banking, insurance, and investment holdings. The bank has an app that allows users to authorize online purchases, hire loans, pay receipts, and more.

■ Skills

- Java Selenium
- TestNG
- Manual Testing

■ Roles And Responsibilities

- Experience in implementing the Page Object Model design pattern for scalable and maintainable Selenium test scripts.
- Strong understanding of handling cookies and sessions in API testing scenarios for maintaining state and session information.
- Strong understanding of handling cookies and sessions in API testing scenarios for maintaining state and session information.
- Strong understanding of XPath and UI Automator for efficient element identification in mobile applications.
- Skillful in parameterizing scenarios for data-driven testing using Cucumber.
- Extensive experience in setting up and managing Maven repositories (local, remote, central) for artifact storage and retrieval.
- Skilled in integrating and configuring custom plugins in Jenkins to extend functionality and support specific requirements.
- Advocate for user experience testing on Android devices to ensure a positive end-user experience.
- Experience in planning and executing integration testing activities to ensure seamless collaboration between software components.

■ Roles And Responsibilities

- Proven ability to manage Maven build lifecycles, specifying phases such as clean, compile, test, package, and deploy.
- Skillful in implementing data-driven testing approaches in Selenium for testing with different sets of input data.
- Familiarity with implementing soft assertions in TestNG for capturing multiple failures in a single test and continuing test execution.
- Skillful in using Jira to manage versioning and releases, ensuring accurate tracking of feature development and testing progress.
- Knowledge of version control for databases to manage schema changes and track database configurations.
- Experience in defining defect life cycle processes within the test plan, from identification to resolution and retesting.
- Experience in attaching screenshots or multimedia files to bug reports to visually highlight the reported issues and provide additional context.
- Proficient in conducting exploratory testing to complement scripted testing and uncover unexpected issues.
- Experience in leveraging Agile metrics, including burn-down charts and velocity, to assess progress and optimize testing efforts.
