CAREER OBJECTIVE

To obtain a full-time position in the field of software testing that leverages my problem-solving, time management, and analytical skills. Eager to contribute to quality assurance processes while continuously learning and growing within a challenging and collaborative environment.

CORE COMPETENCIES

- Detail-oriented **QA Engineer** with **4 years** of proven experience in **Manual** and **Automation Testing**, committed to delivering high-quality, reliable software solutions.
- Extensive expertise in **Selenium WebDriver**, **Java**, **Cucumber**, and **TestNG** for robust test automation and validation of web applications.
- Proficient in implementing **BDD frameworks** such as Cucumber and TestNG to design, develop, and execute scalable automated test suites.
- Successfully designed, developed, and maintained automation test scripts for **regression**, **functional**, and **smoke testing**, optimizing testing cycles.
- Solid knowledge of **Object-Oriented Programming** (OOPS) principles, applying advanced Java techniques for effective test automation.
- Experienced in creating **Test Strategies**, **Test Estimations**, **Test Plans**, and detailed **Test Cases** to ensure maximum functional coverage and traceability.
- Hands-on expertise in functional testing, UI testing, and end-to-end validation of web-based applications in compliance with industry quality standards.
- Skilled in **API** testing for **RESTful** services using **Postman**, with strong understanding of **HTTP** methods (**GET**, **POST**, **PUT**, **DELETE**) and **API** response validations.
- In-depth experience working in **Agile/Scrum** environments, actively participating in Daily Stand-ups, **Sprint Planning**, **Sprint Reviews**, and **Retrospectives** for continuous delivery.
- Collaborated cross-functionally with Developers, Business Analysts, and Product Owners to deliver seamless integration and efficient test coverage within **sprints**.
- Proficient in leveraging **XPath**, **CSS Selectors**, **DOM Inspection**, and **XML** parsing for dynamic and complex element identification in web automation.
- Managed, updated, and optimized **Selenium Automation Scripts** using **Git** and **GitHub** for source control and continuous integration (**CI/CD**) pipelines.
- Experienced in complex **SQL** Query Writing, Data Validation, Database Testing, and Backend Validation using Oracle to ensure data consistency and accuracy.
- Well-versed in using **JIRA** for **Bug Tracking**, **Issue Management**, **Sprint Backlog Management**, and **reporting**, ensuring timely resolution and quality deliverables.
- Exceptional analytical, troubleshooting, and **debugging** skills with a proactive approach towards identifying, reporting, and resolving software defects to improve application stability.

TECHNICAL SKILLS

- Language : **Java**
- Automation Tool : **Selenium**
- Framework : **Cucumber, Junit, TestNG, POM**
- DBMS : **SQL, JDBC**
- Tools & Utilities : **GIT, Maven, Jenkins.**
- Project Management Tool : **JIRA**

EXPERIENCE

- Working as a Junior executive in Spectrum Talent Management Limited (Sun TV) from Sep 2022 to Dec 2024.
- Working as a Software Test Engineer in eGrove Systems from Dec 2020 to Aug 2022.

PROJECTS HANDLED

Project#1: ASO

- Domain : Media
- Role : Test Engineer
- Methodology : Agile

Description:

Ad Spot Optimizer (**ASO**) is a web-based tool developed for Sun TV using IBM ILOG DOC. It automates ad spot allocation and sequencing across TV programs, integrating real-time data from EMSIS like ROs, FPCs, and agreements. ASO ensures revenue optimization while meeting FCT limits, brand caps, and advertiser commitments. Key features include manual spot adjustments, FIB/LIB positioning, multi-level constraints, and detailed reporting. Color-coded UI alerts enhance control, reducing manual errors and boosting ad revenue.

Roles and Responsibility

- Designed and implemented scalable **BDD** test automation frameworks using **Cucumber, Selenium WebDriver, and Java**, ensuring maintainability and improved test readability.
- Created and maintained **Gherkin-based feature files** that accurately represented functional requirements and acceptance criteria, promoting clarity and traceability.
- Developed modular and reusable **step definitions** for efficient execution of functional, regression, and data-driven test cases.
- Collaborated with **Product Owners, BA teams, and Developers** to validate user stories, align test scenarios, and ensure complete end-to-end test coverage.
- Integrated Cucumber with **Maven** to automate build and execution workflows, supporting **CI/CD pipelines** for continuous integration and test delivery.

- Performed data-driven testing by externalizing test data using **Apache POI (Excel)** enhancing test scalability and input validations.
- Executed and maintained automated test suites; logged and **tracked defects** using **JIRA**, attaching logs and screenshots for faster resolution.
- Conducted **UI and API integration testing**, ensuring interaction between frontend components and **RESTful APIs** using custom step definitions.
- Utilized **Git** and **GitHub** for source code management, branching strategies, and collaboration in version-controlled environments.
- Conducted **cross-browser** testing on major browsers (**Chrome, Firefox, Edge**) using **WebDriver Manager**, ensuring consistent UI functionality and responsiveness.
- Actively participated in defect triage meetings, managed **bug lifecycle** in **JIRA**, and ensured timely resolution through coordinated follow-ups.
- Provided timely updates on test coverage, execution status, and defect reports to stakeholders in **Agile Scrum** ceremonies like **Sprint Review** and **Daily Stand-ups**.

Project#2: KITABOO

- Domain : E - Learning
- Role : Test Engineer
- Methodology : Agile

Description:

KITABOO is a cloud-based, interactive e-learning platform that helps in creating, publishing, and distributing digital learning content. It is designed for schools, colleges, and organizations to create engaging learning experiences. KITABOO is known for its user-friendly interface, interactive features, and ability to integrate with existing learning management systems.

Roles and Responsibility:

- Validated specific functionality and regression areas after bug fixes and enhancements through thorough manual testing, ensuring consistent software behavior.
- Strong understanding of **Software Development Life Cycle (SDLC)** and **Software Testing Life Cycle (STLC)**, with hands-on exposure to **Agile methodologies** like **Scrum** and **Test-Driven Development (TDD)**.
- Utilized **Apache Maven** Surefire Plugin to generate detailed **JUnit/TestNG HTML** reports for complete test suites, aiding in real-time test result analysis.
- Designed and implemented a **robust Selenium Page Object Model (POM)** automation framework using **Selenium WebDriver**, **TestNG**, and **Java**, applying **Object-Oriented Programming (OOP)** principles to reduce script development time by 50%.
- Experienced in **cross-browser** and **cross-platform web testing** using Selenium, validating compatibility across Chrome, Firefox, Edge, and **multiple OS environments**.
- Developed and executed pre-condition-based test cases by defining **logical** and **environmental** prerequisites for effective test design and execution.
- Proficient in **SQL** query development for backend validation and **data-driven testing**, ensuring accurate data retrieval across integrated modules and test scenarios.

- Created structured **Test Plans** outlining test objectives, scope, resources, and acceptance criteria to align testing efforts with business and technical requirements.
- Applied **TestNG** features such as dependency management (depends On Methods) and test grouping to optimize test execution flow and manage suite scalability.
- Demonstrated proficiency in session management by handling browser cookies and session data via Selenium **WebDriver APIs** during authentication and user behavior testing.
- Collaborated in daily Agile ceremonies including **stand-ups**, **sprint planning**, and **retrospectives** to discuss progress, blockers, and deliverables with cross-functional teams.
- Prioritized and categorized test cases using **TestNG Groups**, enabling efficient execution based on **functional modules**, **criticality**, or **testing scope**.

EDUCATION

- Bachelor of Computer Science in Kumararani Meena Muthiah College of Arts & Science.
