

Career Summary

- **9.6 years of Experience** as Software Test Engineer.
- Working experience in all phases of Agile Methodology, actively participated in Agile ceremonies
- Extensive Experience in Writing & executing Test Cases & Test Scenarios for various Software requirement specifications & Defect reporting.
- Good in understanding User stories and analyzing them.
- Experience in working with Test/ Defect Management Tools like JIRA.
- Having experience in reporting defects and follow up in Bug Life Cycle
- Experience in Web and Window based applications testing.
- Good interpersonal, communication and Management skills.
- Experience in client interactions, support

TECHNICAL SKILLS

Programming Languages	Core Java
Testing Strategies	Manual, Selenium
Operating System	Windows
Test Management, Configuration, Bug Tracking Tool and Code Repository	QTest, ServiceNow and Jira
Build Tool	Maven
Source code Management Tool	GIT

Project #1: Morgan Stanley

It is a Banking Domain Project and worked as L1 Production Support Engineer.

Responsibilities:

- Analyzed and understood the Business Requirement Specifications.
- Create and maintain documentation related to test automation processes, frameworks, and scripts. Design, develop, and maintain complex and scalable automated test scripts.
- Architect and enhance automation frameworks to support advanced testing scenarios. Mentor and guide junior automation testers, conducting knowledge sharing sessions.
- Analyze test coverage and recommend improvements to test suites. Participate in code and design reviews to ensure high-quality automation code.
- Execute automated tests and provide detailed analysis of test results.
- The automation testing was developed using Cucumber framework, POJO Class, POM, Data Driven.
- Prepare reusable methods to improve productivity and maintainability.
- Prepare Feature files and Step definition in Cucumber. Followed Agile/Scrum Methodologies for all of the project activities.
- Execution of API testing using POSTMAN. Performed the testing using GET, POST, PUT and DELETE functionalities in Postman and executed with Run Collection and Shift management
- Analyzing defects
- Handling the Ticket and assign the ticket in ServiceNow within SLA.
- Analyzing Ticket scenario and defect reporting.
- Involved in testing the application utilizing the Waterfall methodology.

Project # 2: Verizon

It is a Telecommunication Project and worked as Manual Test Engineer.

Responsibilities:

- Generating Test Scenarios, Test case documentation and test data collection.
- Design, develop, and maintain test plan and test cases effectively.
- In depth experience of test planning, analysis and scripting.
- Understanding existing test cases and test data, and executing the test cases and validating results in line with the project schedule and productivity metrics.
- Experience of testing within an Agile environment, adapting quickly to changing situations. Experience working with JIRA or similar scrum, bug and project tracking tools.
- Reviewing the test cases based on Requirements.
- Responsible in supporting quality related activities.
- Coordinating with Development and Business team for Defect resolution.
- Analyze and prepare automation scripts in TestNG framework and Executed Test Cases as per System Requirements.
- Involved in testing the application utilizing the Scrum (Agile) methodology.
- Review the Test scenarios, identifying test cases.
- Executing the manual test cases and analyze the results.
- Analyzing test report and defect reporting.
- Identifying the defects and reporting it through Defect Tracking Tool and following the Bug Life Cycle.

Project # 3: Asda

It is a Retail Project and worked as Manual Test Engineer.

Responsibilities:

- Analyzing the user stories, prepare the test scenario and Test Cases.
- Understanding the Business Requirement Specifications. Designing Test Cases, Execution of the test cases and reporting the bugs.
- Conducted Functional testing with Valid and Invalid inputs for positive and negative testing.
- Preparing Defect report as per severity and priority Active participation in meetings.
- Developing reusable functional components in the framework Execution of test scripts and debugging.
- Used Maven to build and run the Selenium automation framework.
- Execution of Selenium Test cases and Reporting defects.
- Raise and track defects until closure
- Involved in testing the application utilizing the Scrum (Agile) methodology.
- Executing the manual test cases and analyze the results.
- Raise and track defect until closure. Re-test the resolved defects
- Debug and fix the script issues.
