CLIENT BACKGROUND

Client : **AT&T Cybersecurity**

Industry: **Cybersecurity Consulting**

Products and Services: **Cybersecurity, Network Security & Risk assessment**

Area of operation: **USA, Ireland, Spain, Australia**

Employees: **750+**

ABOUT **AT&T**

AT&T Cybersecurity is a leading Managed Security Service Provider (MSSP) focused on identifying, preventing and allaying any potential loss caused by cyber-attacks. Their services include Cybersecurity Consulting, Network Security, Threat Detection and Endpoint Security

CHALLENGES

-  AT&T cybersecurity uses the SaaS business model to sell products and acquire customers online. The website is central to their marketing and sales effort
-  AT&T was experiencing problems integrating web forms with Salesforce CRM and Marketo, resulting in a loss of leads
-  Furthermore, their custom-developed APIs are defective, significantly contributing to the poor user experience
-  They were seeking a dedicated QA team that could test their website's ongoing developments, automate regression testing suites, and pinpoint defects by providing detailed steps to reproduce them

SOLUTIONS

A deep understanding of customer requirements enabled QAonCloud to formulate and execute highly effective test plans

Our QA team studied the customer's web and API requirements and developed an appropriate QA solution for AT&T cybersecurity

The project turned into a long-term partnership with QAonCloud in 2016. Since then, we have written over 2000 test cases for each module and are continuing to do so

There have been over 1200+ defects identified in the successive improvements made to the website over the last few years. Of these, 30% were major bugs. Approximately 95% of the bugs reported have been accepted

With the use of Selenium, we could automate over 70% of the test cases

Cross Browser and Mobile
Testing

Automation and Manual
Testing

BUSINESS IMPACT

AT&T Cybersecurity's Sales and Marketing teams have been pleased with the website's enhanced quality and reliability. As a result of our sustained efforts, our client's Sales and Marketing teams no longer worry about the reliability of web forms and continue to utilize them as effective lead-generation tools. Our satisfied customer, AT&T Cybersecurity, has an ongoing partnership with us to test new iterative versions of their website
