

End-to-end Manual & Automation Testing

of MVNE & Reseller Platform

Enhancing overall test coverage through Unit, Integration, Regression testing and Automating test cases with Cypress & Appium

Client Background

Client Name: IQHive

Industry: Telecommunications

Products: Wholesale platform – MVNE(Mobile Virtual Network Enabler) & Reseller Platform

Area of operation (Locations): Auckland, New Zealand

Services: PrePay Mobile, PostPay Mobile, Fiber Broadband, Fixed Wireless

About the Client

IQHive is a Telecommunications solutions provider that offers wholesale platforms for various telecommunications networks. Vodafone is one of their largest customers in New Zealand, among many other top performers in the industry. IQ Hive's wholesale platform hosts the Vodafone network, allowing them to provide wholesale services to other companies. IQHive operates with teams in New Zealand, India, and Ukraine.

Challenges

- 1 Launching fully functional platforms at a faster pace without proper QA testing was next to impossible for the IQHive team.
- 2 The development teams found it challenging to perform thorough manual checks with an eye for the details for every feature release and could not compromise on the quality of the product.
- 3 It was expensive for IQHive to build an internal QA team with a skilled and experienced pool. Also, they lack in-house Automation Testing expertise, so the IQHive team reached out to QAonCloud to bridge this gap.

Challenges

- 4 IQHive needed complacent teams who could understand end-to-end functionality and write test cases.
- 5 After the new build's deployment (Production and Pre-Production), they needed skilled QA teams to perform full regression testing once a week.
- 6 IQHive needed help in logging the issues immediately in the respective bug-tracking tools after finding the defects.
- 7 They also needed assistance in retesting the tickets under the Retest list.

01

With QAonCloud, IQHive onboarded highly skilled manual and automation resources in a short period of time.

02

Expert QAonCloud teams have created Unit, Integration, and End-End test cases for overall test coverage and executed hundreds of cases as a part of regression cycles.

03

Repetitive test cases were automated using Cypress tools for web applications and the Appium tool for mobile automation testing.

04

QAonCloud's implementation of combined automation and manual testing has drastically reduced the load on the developers.

05

QAonCloud teams produce regular reports to help them understand the areas of improvement

06

QA teams immediately reported all the critical and significant issues through efficient communication channels like slack, enabling the dev teams to address and close the tickets quickly.

Total bugs found

1600+

Total no of test
cases written

700+

Two manual and Two Automation testers with a delivery manager

Business Impact

- 1** QAonCloud team has uncovered close to **1600+ bugs** that have greatly increased the product quality, thereby empowering the business with an elevated user experience.
- 2** Our End-End test coverage and quick feed-backs have accelerated the development process with more efficiency which has rendered a seamless user experience for **IQ Hive's clients**.

“ Client testimonial

Thanks to QAonCloud Expert Teams, IQHive Team is now able to focus on its development process and scaling its business. QAonCloud undertakes manual and automation testing activities. We also perform weekly regression cycles and produce regular test reports to give IQHive a complete overview of the status and progress.
