END-TO-END FUNCTIONAL TESTING LOAN MANAGEMENT MOBILE AND WEB APPLICATION

QAonCloud team performed end-to-end functional testing to facilitate quick and stable releases of the client's fintech application

www.qaoncloud.com | Indihood.com

CLIENT BACKGROUND

Client Name: Indihood

Industry: Information Technology

Products and Services : Crowdsourcing platform, Loan management platform

Area of operation (Locations): India

Employees: 29

ABOUT INDIHOOD

Founded by Indian industry stalwarts Ratan Tata, Nandan Nilekani and Vijay Kelkar, Indihood has built its crowd sourcing platform, Avanti Finance, to extend credit and other critical financial products to unserved and underserved households in India

CHALLENGES

Indihood had a mobile loan application built for first-time mobile fintech users

The app needed to be made more user-friendly and secure by eliminating functional and performance defects

They were struggling with end-to-end QA Testing of new and old features of the application

Indihood was looking for a QA partner that could understand the app's complex workflow and provide the best continuous test strategy to ensure complete coverage

Also, the application needs to be tested across various mobile devices and platforms, as there were constant feature updates

SOLUTIONS

- 1 QAonCloud's team quickly jumped on board, comprehended all the functional specifications, and devised a tailor-made QA solution based on Indihood's requirements
- 2 Our robust end-to-end testing strategy helped achieve high test coverage for our client's customer-facing mobile application and the supporting web application, used for internal use cases, such as loan approval, loan creation, and partner creation
- 3 As there were constant updates, our team updated the test cases, scenarios, and traceability to work products to match the evolving requirements. We used JIRA to capture requirements and map them to test cases and defects
- 4 The team tested the app on multiple android devices using sensors such as fingerprint scanners
- 5 Our test experts identified latency issues by monitoring the application performance on Android Studio

Web and Mobile App
Testing

Manual Testing

Notified development team of any
persistent latency issues

BUSINESS IMPACT

QAonCloud has helped Indihood to rapidly release all the planned upgrades through a tailor-made testing strategy and comprehensive test coverage. With each major feature release and update, we, as their trusted QA partner, have performed Continuous Testing of base models and priority test cases

Builds tested

110+

Valid crashes found

20+

Defects accepted

93%

Test cases are written to date over iterative releases

3000+

Functional defects covered

60%

Defects Identified to date over iterative releases

1500+

Client testimonial

QAonCloud have constantly impressed us with quick turnarounds and detailed reports on testing. In addition, they have accommodated our requests for quick tests and sanity tests within a few hours
