SUMMARY

A seasoned and results-driven QA Manager with over 16 years of extensive experience in leading quality assurance initiatives across diverse industries. Proven track record of implementing strategic QA processes, driving continuous improvement, and ensuring adherence to quality standards. Seeking to leverage expertise in QA management to contribute to the success of a dynamic organization.

EXPERIENCE

Quality Manager
Hanatech Solutions Pvt Ltd

May 2020 - Apr 2024

key objectives:

- Define and establish comprehensive QA strategies, policies, and procedures that align with business goals and industry best practices.
- Ensure that QA processes are scalable and adaptable to various project requirements and timelines.
- Lead, mentor, and manage a team of QA engineers, fostering a culture of continuous improvement, collaboration, and high performance.
- Provide training and development opportunities to enhance the skills and knowledge of the QA team.
- Oversee the creation and execution of detailed test plans, test cases, and test scripts to ensure thorough testing of all software products.
- Ensure that testing activities cover all aspects of quality, including functionality, performance, security, usability, and compliance.
- Allocate resources effectively to meet project deadlines and quality objectives, balancing workload and priorities within the QA team.
- Monitor project progress, address issues, and ensure that testing milestones are achieved on schedule.
- Collaborate with cross-functional teams, including development, product management, and operations, to ensure alignment on quality goals and requirements.
- Communicate QA activities, progress, and risks to stakeholders, providing regular updates and transparent reporting.
- Drive the adoption of test automation tools and frameworks to increase testing efficiency, coverage, and accuracy.
- Define, track, and analyze key quality metrics to measure the effectiveness of QA activities and identify areas for improvement.
- Identify potential quality risks early in the development process and develop mitigation strategies to address them.
- Ensure that QA processes comply with industry standards, regulatory requirements, and company policies.
- Focus on understanding and meeting customer expectations for product quality and reliability.

Techjini Solutions

- Developed and implemented a comprehensive QA strategy that led to a 40% reduction in defect rates and a 30% improvement in overall product quality.
- Standardized QA processes across multiple projects, resulting in consistent quality and faster time-to-market.
- Built and managed a high-performing QA team, reducing turnover by 20% and increasing team satisfaction scores through targeted training and mentorship programs
- Spearheaded the adoption of test automation tools and frameworks, increasing test coverage by 50% and reducing regression testing time by 60%.
- Established key quality metrics and reporting dashboards, providing stakeholders with real-time insights into testing progress, defect status, and overall product quality.
- Used data-driven analysis to identify areas for process improvement, leading to a 25% increase in testing efficiency and effectiveness.
- Implemented a robust defect tracking and management system, reducing the average time to resolve issues by 40%.
- Fostered strong collaboration between QA, development, and product management teams, ensuring alignment on quality objectives and requirements.
- Successfully managed stakeholder expectations by providing regular updates and transparent communication on QA activities and risks.
- Ensured compliance with industry standards and regulatory requirements, achieving successful audits and certifications.
- Implemented user experience testing practices that improved product usability and customer satisfaction scores by 20%.
- Collected and analyzed customer feedback to identify quality issues and drive improvements, resulting in a more user-friendly product.
- Led QA efforts for multiple high-impact projects, ensuring on-time delivery with high-quality standards and zero critical defects post-launch.
- Managed QA for complex, large-scale software deployments, coordinating efforts across distributed teams and ensuring seamless integration.

Sr.Tech Lead-QA
Datamatics(Techjini Solutions)

Jul 2014 - May 2020

Key Objectives:

- Develop and implement comprehensive QA strategies, methodologies, and processes to ensure software quality
- Plan and oversee the execution of test plans, test cases, and testing activities.
- Continuously improve QA processes based on feedback and industry best practices.
- Lead and mentor QA team members, providing guidance, support, and professional development
- Allocate resources effectively to meet project deadlines and quality goals.
- Collaborate with cross-functional teams, including development, product management, and operations, to ensure alignment on quality objectives and requirements.
- Communicate effectively with stakeholders to provide updates on QA activities, risks, and issues.
- Advocate for and implement test automation strategies to increase efficiency and coverage.
- Define and track key quality metrics to measure the effectiveness of QA activities.

- Analyze test results, identify patterns, and generate reports to inform decision-making and continuous improvement.
- Address and resolve issues promptly to minimize impact on project timelines and product quality.
- Ensure that QA processes comply with industry standards, regulatory requirements, and company policies.
- Stay updated with the latest trends, tools, and best practices in software testing and quality assurance.
- Promote a culture of quality and continuous improvement within the organization.

Accomplishments

- Successfully designed and executed comprehensive QA strategies that led to a 30% reduction in defect rates.
- Introduced and standardized QA methodologies across multiple projects, resulting in consistent and improved quality outcomes.
- Built and mentored a high-performing QA team, reducing turnover rates by 25% and increasing team satisfaction scores.
- Conducted regular training sessions and workshops, enhancing the technical skills and proficiency of team members in automation and manual testing.
- Spearheaded the adoption of advanced test automation frameworks, leading to a 50% increase in test coverage and a 40% reduction in regression testing time.
- Implemented continuous integration/continuous deployment (CI/CD) pipelines with automated testing, significantly accelerating release cycles.
- Streamlined QA processes by introducing risk-based testing approaches, improving test planning efficiency, and reducing overall testing time by 20%.
- Successfully collaborated with development and product management teams to ensure alignment on quality objectives, reducing post-release defects by 35%.
- Established and tracked key quality metrics, providing actionable insights that drove continuous improvement in the QA process.
- Developed comprehensive reporting dashboards that provided real-time visibility into testing progress, defect status, and quality trends.
- Ensured compliance with industry standards and regulatory requirements, resulting in successful audits and certifications.
- Led QA efforts for multiple high-impact projects, ensuring timely and high-quality product releases.
- Delivered complex projects with zero critical defects post-launch, enhancing the company's reputation for quality and reliability.
- Introduced innovative testing tools and techniques, staying ahead of industry trends and continuously improving the QA process.

Module Lead-QA

Jun 2010 - Jun 2014

Obopay Mobile Technology

Key Objectives:

- Develop and execute detailed test plans and test cases for assigned modules.
- Ensure thorough testing of software modules, including functional, regression, performance, and security testing.
- Lead and manage a team of QA engineers focused on specific modules.
- Provide guidance, support, and mentorship to team members to enhance their skills and performance.
- Work closely with development teams, product managers, and other stakeholders to understand module requirements and ensure alignment

on quality objectives.

- Ensure the team uses appropriate testing tools and technologies to enhance efficiency and coverage.
- Define and monitor key quality metrics specific to the modules.
- Analyze test results and generate reports to provide insights into the quality status of the modules.
- Stay updated with the latest trends and advancements in software testing and apply relevant improvements.

Accomplishments

- Led the QA efforts for a critical software module, ensuring its release with zero critical defects
- Coordinated the testing activities for multiple modules, resulting in a 25% reduction in overall defect density.
- Developed and maintained a suite of automated test scripts, which improved regression testing efficiency and accuracy.
- Streamlined QA processes for specific modules, leading to a 20% increase in testing efficiency.
- Mentored and trained junior QA engineers, resulting in improved team performance and faster onboarding of new team members.
- Fostered a collaborative team environment, enhancing communication and cooperation between QA and development teams.
- Facilitated regular cross-functional meetings to discuss quality goals, testing progress, and risk mitigation strategies.
- Ensured QA processes for modules complied with industry standards and regulatory requirements, achieving successful audits and certifications.
- Delivered multiple high-impact projects on time and with high quality, receiving commendations from management and clients.
- Managed QA for complex modules in large-scale projects, ensuring smooth integration and functionality across the software system.

QA Engineer Techjini Solutions

Mar 2008 - Jun 2010

Key Objectives:

- Identify, document, and track defects in the software, ensuring they are effectively communicated to the development team.
- Verify defect fixes and perform regression testing to ensure resolved issues do not reoccur.
- Work closely with developers, product managers, and other stakeholders to understand requirements and provide feedback on quality issues.
- Provide regular updates on testing status, risks, and issues to the CEO, CTO and other stakeholders.
- Provide feedback on user experience issues and work with the design team to address them.

Accomplishments

- Identified and reported over 200 critical defects, significantly improving the quality of the software before release
- Reduced defect leakage to production by 30% through rigorous testing and effective communication with the development team.
- Generated detailed testing reports and dashboards, giving stakeholders real-time visibility into testing progress and quality status.
- Worked Multiple projects at a time
- Worked on Andriod ,IOS and Blackberry Mobile application
