- Establishing appropriate test metrics and KPIs to measure the effectiveness and efficiency of the testing process. Monitoring and analyzing test metrics to identify areas for improvement and ensure adherence to quality standards.
- Engaging and communicating with stakeholders, such as project managers, developers, business users, and customers, to understand their expectations, address concerns, and ensure alignment of testing activities with project goals.
- Ensure that testing activities comply with relevant industry standards, regulations, and organizational policies.

Project Summary:

Project Name : Commerce & Connectivity (B2B) – Accenture
Client : Dyson
Role : Test Engineering Manager
Team Size : 29
Responsibilities :

- Creating a comprehensive test strategy and test plan that outlines the testing objectives, scope, approach, defining test environment, test schedules, resource allocation and test deliverables.
- Building and leading a team of both manual and automation testers, assigning tasks, and managing their workload. Providing guidance and mentoring to team members, and promoting a collaborative and productive work environment
- Continuously improving the testing process by adopting industry best practices, implementing efficient test methodologies, and evaluating new test tools and technologies. Identifying process bottlenecks and implementing strategies to optimize testing effort.
- Estimating the testing effort, resources, and budget required for the project. Collaborating with project managers and stakeholders to ensure adequate resources are allocated for testing activities.
- Overseeing the test execution of test plans. Monitoring the progress of testing activities, defect management and ensuring timely reporting of test results to stakeholders. Analyzing and communicating the test status, risks, and issues to the project team and management
- Collaborating with development teams, business analysts, and other stakeholders to ensure a clear understanding of requirements and effective communication throughout the testing process.

- Identifying and assessing project risks associated with testing activities.
- Establishing appropriate test metrics and KPIs to measure the effectiveness and efficiency of the testing process. Monitoring and analyzing test metrics to identify areas for improvement and ensure adherence to quality standards.

Project Name : UNITED SERVICES AUTOMOBILE ASSOCIATION – Accenture
Client : USAA
Role : Test Engineering Manager
Team Size : 15
Responsibilities :

- Creating test strategy and test plan that outlines the testing objectives, scope, approach, defining test environment, test schedules, resource allocation and test deliverables.
- Building and leading a team of both manual and automation testers, assigning tasks, and managing their workload. Providing guidance and mentoring to team members, and promoting a collaborative and productive work environment
- Continuously improving the testing process by adopting industry best practices, implementing efficient test methodologies, and evaluating new test tools and technologies. Identifying process bottlenecks and implementing strategies to optimize testing effort.
- Estimating the testing effort, resources, and budget required for the project. Collaborating with project managers and stakeholders to ensure adequate resources are allocated for testing activities.
- Overseeing the test execution of test plans. Monitoring the progress of testing activities, defect management and ensuring timely reporting of test results to stakeholders. Analyzing and communicating the test status, risks, and issues to the project team and management
- Collaborating with development teams, business analysts, and other stakeholders to ensure a clear understanding of requirements and effective communication throughout the testing process.
- Identifying and assessing project risks associated with testing activities.
- Establishing appropriate test metrics and KPIs to measure the effectiveness and efficiency of the testing process. Monitoring and analyzing test metrics to identify areas for improvement and ensure adherence to quality standards.

Project Name : Citi (Corporate Banking) – VIRTUSA POLARIS
Client : CITI
Role : Vertical Lead
Team Size : 19
Responsibilities :

- Involving in requirement analysis based on the Functional Specifications document and identify requirement gaps
- Preparing the Effort estimation for the projects and tracking the efforts of the resources.
- Preparing and reviewing Test plans, Test Entry and Exit criteria document for SIT environment.
- Reviewing the Signoff, Test completion report for the completed releases.
- Conducting CAM (Casual Analysis Meeting) with team on the defect leakages and its mitigation plans.
- Presenting the multiple metrics to application stake holder on Release basics.
- Metrics that involved in presentation is Test preparation productivity, Test execution Productivity, Defect Detection ratio, Test efficiency, Schedule and Effort Variances for the vertical on monthly basics.
- Conducting team meeting at the closure phase of every release to understand the lessons learnt based on the challenges faced in execution phase and create the repository of the lessons learnt to over the similar kind of challenges faced in future executions.
- Taking advantage of job opportunities in learning new technical areas and Shares knowledge with team members
- Support the sales team by providing required data for their sales pursuits.
