Cuddalore

ABOUT ME

Proactively identify areas for process improvement and contribute to the enhancement of testing methodologies and best practices

WORK EXPERIENCE

Globant Sep 2018 - Present

With 5+ years of Experience in Mobile Testing, API Testing, Web application testing with Java Selenium, BDD Cucumber, TestNG, Jenkins, Appium, Postman, Rest Assured and Effectively managed the entire defect life cycle, from identification and documentation to resolution and verification, maintaining a low defect escape rate.

SKILLS

- Java Selenium
- TestNG
- BDD Cucumber
- Postman
- Rest Assured
- Jenkins
- Appium
- JIRA
- Maven
- SQL
- GIT

EDUCATION

B.Sc | Computer Science
Idhaya College For Women
2015 - 2018

PROFESSIONAL SUMMARY

- We define repositories for downloading project dependencies by using Maven.
- The creation of custom workspaces for each build, preventing interference between different regression test runs can be performed by Jenkins.
- We avoid specifying implementation details in feature files in BDD Cucumber.
- Element locators in Appium support various strategies like ID, XPath, and accessibility identifiers.
- In Postman, testing API caching mechanisms and cache control headers.
- Rest Assured allows setting request headers, parameters, and authentication details.
- Actions and Robot class in WebDriver supports for mouse and keyboard interactions in Selenium.
- TestNG facilitates dependency testing, where the execution of one test depends on the success of another.
- Jira provides comprehensive defect management capabilities, including bug tracking and resolution.
- Validate the enforcement of data constraints, such as unique keys and foreign keys can be performed by MySQL.
- In GitHub, we host the codebase centrally, ensuring easy access for all team members.
- We list the specific features and functionalities that will be tested while preparing the Test Plan.
- The output of test design is often documented in a test design specification or a test case repository.
- Release notes are typically intended for end-users, customers, and sometimes internal teams.
- We check how the software performs on different browsers, devices, and platforms

PROJECT I - IPPINKA

Domain : ECommerce
May 2020 - Oct 2023

DESCRIPTION

IPPINKA is a company that curates products that are functional, well-made, and long-lasting. They focus on design, quality, and sustainability.

SKILLS

- Java Selenium
- BDD Cucumber
- Postman
- Rest Assured
- Jenkins
- Appium

PROJECT II - BANK PASARGAD

Domain : Banking
Sep 2018 - Apr 2020

DESCRIPTION

Nykredit is a Danish financial services company and ykredit offers a variety of services like Banking, Mortgage lending, Insurance, Pensions, Estate agency, Leasing, Asset management, Securities and derivatives trading, Wealth management, Housing finance.

SKILLS

- Java Selenium
- TestNG
- Manual Testing

ROLES AND RESPONSIBILITIES

- GitHub maintains a detailed history of commits, helping trace changes over time.
- Validate the enforcement of data constraints, such as unique keys and foreign keys can be perform by MySQL.
- Plan test activities and schedules using JIRA's release and version management features.
- Selenium WebDriver has built-in support for handling iframes in web pages.
- Rest Assured library enables data-driven testing with data sets from various sources.
- Environment variables in Postman facilitate testing across different environments.
- Automated data entry into fields, including forms and text input, is supported by using Appium.
- Cucumber tests can be executed from the command line or integrated into CI/CD pipelines.
- We define repositories for downloading project dependencies by using Maven.
- We ntegrate Jenkins with test management tools for comprehensive test case management.

ROLES AND RESPONSIBILITIES

- Maven allows us to specify the project's goals and plugins.
- we define repositories for downloading project dependencies by using Maven
- Page Object Model (POM) design pattern, we used with Selenium WebDriver for better test maintenance.
- Selenium WebDriver can perform data-driven testing by integrating with external data sources.
- TestNG provides a set of assertions for validating expected and actual results.
- In TestNG, Assertions are used within test methods to verify conditions.
- Integrate JIRA with test automation tools to trigger tests and log results.
- In Test Plan, we identify any dependencies on other teams or activities.
- Grouping input values into equivalence classes for testing while prepare Test Design.
- We list and describe issues or bugs that have been resolved by using Release Notes.
- We tests the software's behavior with invalid or unexpected input
