Skype ID: m.anton05

Current Location: Sydney, Australia

Mahesh Anton is a multifaceted IT professional with 17+ years of experience. He is ambitious, result-oriented, highly accomplished individual with the motivation to succeed, while enabling his team's growth. He is passionate towards mentoring, career planning and motivating people to perform. His areas of expertise include Delivery management, Agile Transitioning, Agile Testing and architecting Test Automation Frameworks.

Delivery Management

- Managed global implementations and parallel rollouts
- Managed multi-million Application Maintenance and Support projects with 100% SLA and a team size of 55+
- Managed multiple large scale Testing projects
- Managed Multiple Vendors
- Expertise in performing due diligence of delayed projects and implementing corrective measures

Test Automation

- Architected, managed and implemented many automation frameworks
- Expertise in Automation frameworks for Web Applications, Embedded Device Testing, Mobile Applications
- Experience in cloud hosted platforms, Data Analytics Testing, API Testing, Performance Testing, BOTs Testing

Agile Transition & Testing

- Lead the Agile transition of testing projects from V-model and application maintenance & support projects from waterfall
- Drove implementation of best agile practices: dynamic team collaboration, informative metrics, continuous improvement
- Proven experience in setting up and successfully running Quality Assurance Practice with Agile Quality Management
- Experience in Agile Testing using BDD and ATDD approaches
- Experience in establishing DevOps Test Strategy for Continuous Testing
- Certified Scrum Master

MAJOR ACCOMPLISHMENTS

- ❖ Successfully delivered multiple releases for the PHM Suite of applications improving productivity by 10%, improved defects induced by 50 – 90% and a cost savings of 10%.
- ❖ Managed and delivered large-scale global implementation of integrated Taximeter Devices. Working onsite in Netherlands for global delivery, rolled out 12,000 units per year. Managed the post installation support, including the push of upgraded releases and fixes. Enabled a revenue of ~15 million EUROS per year.
- ❖ Successfully coached and managed agile transition projects from V-model to Agile Testing for PHM suite of applications aiding business agility, faster time-to market and enhanced customer experience.
- ❖ Architected and designed the automation framework for the mass testing of integrated taximeter devices, that enabled the successful global delivery 12,000 units per year, with the need for complete testing of each unit.
- ❖ Experience spans diverse industries such as Banking, HealthCare, Mobility, Hospitality, Travel, Telecom, VAS, e-Commerce, and Logistics.
- ❖ Anchored many medium to large size proposals for ASM (Application Support & Maintenance) and Testing projects, with a few wins during my tenure with Services Companies. Also, have supported Product Sales Team in taking the developed products to prospective clients.

CERTIFICATIONS

- ❖ **PMI ACP** Certified Professional
- ❖ **Prince 2 Practitioner** Certification from APMG
- ❖ **Certified Scrum Master** (CSM) from Scrum Alliance
- ❖ **ISTQB-ISEB Foundation** Certification from BCS – UK Testing Board
- ❖ **ISEB Intermediate** Certificate from BCS – UK Testing Board
- ❖ **ITIL Foundation** Certification from OGC – APMG
- ❖ **ITSM Foundation** Certification from OGC – APMG
- ❖ Test Management Certification from IBM.
- ❖ **Performance Centre** Certification from HP.
- ❖ Quality Centre Certification from HP.
- ❖ Microsoft Certified Professional (MCP) in Networking
- ❖ Micro Certification - ServiceNow on ATF
- ❖ Micro-Certification - Welcome to ServiceNow

EXPERIENCE SUMMARY

Aug'22 – Nov'23: Infosys Australia as Lead Consultant

Jun'21 – Aug'22: HCL Australia Services Pty. Limited as Test Manager

Jun'16 – Mar'20: Infotech Global (HealthEC) as UAT Manager / Sr. Testing Manager - Automation

Jun'14 – Jun'16: VDI Solutions, Singapore as Freelance Consultant cum Architect

Mar'12 – Apr'14: Insigno Quipment Technologies India Pvt. Ltd., as Test Manager

Seb'07 - Oct'11: Trimble Information Technologies India Pvt. Ltd., (MRM Sector) as Project Lead – QA

EDUCATION

- ❖ Master of Computer Applications (MCA) from St. Joseph's College, Cuddalore, University of Madras, India in 1997
- ❖ Bachelor of Science (Mathematics) from Mazhrul Ullom Arts and Science College, Ambur, University of Madras in 1994

TECHNICAL SKILLS

Automated Functional Testing	: Selenium, QTP 11.0, TOSCA, ServiceNow ATF
Reports	: XSLT, ReportNG, ExtentReports.
API/Web Services Testing	: SoapUI, Postman, REST Assured
Cloud Platform	: Sauce Labs, Docker, BrowserStack, LambdaTest
Mobile Application Testing	: Appium, Perfecto
Embedded Device Testing	: Squish
Performance Testing	: LoadRunner 11.0
Test Management & Defect Management	: Quality Center 12.0 (HP ALM), MS Test Manager 2017 (MTM), Bugzilla, TFS, Jira, XRAY
Test Frameworks	: Cucumber, Hybrid, Test Driven Development (TDD), Behavior Driven Development (BDD)
CI	: Jenkins, GitLab CI, Bamboo CI
Version Control	: SVN, GitHub
Build Management	: Maven
Programming Languages	: Java Script, VB Script, Python
Project Management Tools	: MPP, Jira
Databases	: MySQL Server 2019 /2022, MongoDB, PostgreSQL

Overall Responsibilities

- Overall accountable and responsible for delivery of testing services
- Establish quality assurance best practices and benchmarks and drive adoption across the QA team.
- Work closely with QA Managers, Development Managers, and the software development directors to develop and execute QA Strategies to meet / exceed department quality goals.
- Defining QA Strategy, approach, and execution in development projects
- Establishes and maintains effective working relationships with the Vendor Test Managers/Test Leads for the respective domains.
- Leading and directing the QA Leadership team.
- Leading and managing the testing team in the execution of functional, Non-Functional, Security testing and customer readiness validation (Customer experience, UI – Look and feel, Cross browser and Device testing)
- Work closely with and mentor more junior Quality Assurance engineers, help establish the organization's QA roadmap, and build a world-class QA engineering team.
- Managing testing departments, managing large and complex activities and processes.
- Managing multiple vendors on the Project execution, timeline, and quality deliverables
- Provide leadership and technical expertise within the Test automation and Quality Assurance
- Participate in interviews, induction, training, and performance evaluation of all QA leads.
- Ensuring that the development team adheres to the principles, guidelines and best practices of QA Strategy as defined.
- Continuous QA Improvements including the usage of appropriate testing tools, test techniques, and test automation.
- Estimation, planning, monitoring and governance; Performance monitoring, productivity, KPI/SLA Performance
- Monitoring all the QA Activities, test results, leaked defects, root cause analysis and identifying the areas of improvement. Implement the steps required to improve the processes.
- Monitoring of various health reports collection and review of identified metrics.
- Gather and present the test metrics and testing activities for the project to key stakeholders.
- Ensure the maximum usage of available tools to gain the maximum benefit of the QA effort. This includes functional, Non-functional, automation, etc.,
- Primary point of contact for all matters related to testing and quality assurance.
- QA Management across multiple Projects, offshore and in-house
- Implementing and managing the company's QA Process and strategies
- Strong technical skills, both functional and non-functional, manual and automation, in a continuous delivery environment.
- Excellent knowledge in Risk Management, Risk Identification and Risk based testing.
- Manage training and continuous learning of QA Staff by means of short courses, conferences, meetups, certifications, etc.,
- Driving and improving the QA Teams in areas of Automated testing and agile testing

ANNEXURE – Key Projects Handled

Organisation	:	INFOSYS AUSTRALIA SERVICES PTY. LTD
Client	:	Westpac
Products	:	Resilience – Physical Security and Risk Assessment (BRAM / PRA)
Tenure	:	Jun'23 – Nov'23
Roles	:	Test Manager

Product Description:

The Risk Assessment system is expected to integrate with Incident data to provide accurate reporting and insight into the physical security risks across all the group assets and events, the control in place, their effectiveness, and recommendations provided for business to follow-up and action. Any changes recorded in the group systems, will trigger a workflow/call-to-action for a re-assessment of physical security risk at a particular location, or physical security control uplift.

Technologies	:	ServiceNow
Testing Tools / frameworks	:	Jira, ALM, XRAY, ServiceNow ATF
Modules	:	ITSM / ITOM (Change, Incident, Knowledge, Problem, MIM)
Vendors	:	EY, Infosys, ServiceNow

Core Responsibilities:

- Overall accountable and responsible for delivery of testing services
- Works with the Vendor and other Bank stakeholders to review, provide feedback and sign off on the test strategy, test plans and other Vendor artefacts for the testing service delivery across upcoming releases.
- Verify the quality of deliverables in Vendor sourced solutions and ensure the delivered solution meets the business needs of Westpac.
- Engages with various Bank stakeholders (including but not limited to, application, security, infrastructure, business), testing service providers to ensure testing services meet the banks objectives and demand.
- Coordinates with the Test Governance team to ensure adoption of testing methods, standards, and tools, and to coordinate any health checks or audits.
- Works closely with the Test Engineering Lead to provide inputs around domain specific test engineering requirements and ensure that they are met.
- Establishes and maintains effective working relationships with the Vendor Test Managers/Test Leads for the respective domains.
- Manage the full E2E / UAT testing in distributed delivery environment.
- Develop and implement an effective, robust Test Strategy by coordinating with stakeholders.
- Review Program level business requirements, technical specifications, end to end business process and solution design documents.
- Provided leadership and direction to the global support team as well as partner teams in infrastructure and development.
- Identified and managed complex issues, preventing escalations, where possible.
- Provided executive level visibility to operational performance, incident and outage, resources assigned.
- Managed the resources efficiently within and across multiple project schedules
- Managed project risks effectively.
- Identified challenges and proposed meaningful solutions.
- Point of escalation for testing teams in order to resolve issues / mitigate risks

Organisation : INFOSYS AUSTRALIA SERVICES PTY. LTD
Client : Westpac
Products : Origination Transformation (OT) – Credit Card Application Processing (ETB / NTB)
Tenure : Aug'22 – May'23
Roles : Lead Consultant

Product Description:

OT (Origination Transformation) is an end-to-end Digital Journey for Application. Providing feature for customer to apply the card from Digital pages / online Banking for Existing / New Customer and with help of legacy system the product has been allocated to customer without any manual intervention in short span of time. This project is to replace the legacy platforms. in CF (Oregon, LOS) to the new mesh-based origination platform

Technologies : Pega
Testing Tools / : Jira, XRAY, Manual Testing, End-to-End (E2E), Postman frameworks

Core Responsibilities:

- Handling single and multiple projects independently
- Involved in Functional / system and End-to-End Testing
- Coordinate with the client for gathering knowledge about the existing system functionality and understanding new requirements for projects.
- Responsible for creating Test Strategy / Test Plan, Test Model and Test cases based on the requirements and design documents.
- Coordinate with different team to resolve the testing queries.
- Attending / Conducting the daily status calls and providing the input from testing side
- Conducting business walkthroughs for the Test Plan / Test cases and getting approval from business
- Conducting defect triage meetings, Preparing the Daily status report / TCR
- Discussing with Project Managers and suggesting the process improvement
- API Webservices testing using Postman.

Organisation : HCL AUSTRALIA SERVICES PTY. LTD
Client : Commonwealth Bank Of Australia
Products : CASPA / CAPOW – Payments
Tenure : Oct'21 – Aug'22
Roles : Test Manager (Agile Testing & Automation)

Product Description:

PEGA- upgrading the Processing, Retail Group lending, Group supplier management services use existing Back-office input solution as a centralized tool to facilitate account credit and Debit instructions to down stream system like SAP, GWD, GL, HLS and various other systems on behalf of customers government agencies and other financial institutions.

Payment instructions are

- Manual User Entry -PEGAMUE
- Bulk upload - PEGA Bulk upload

Technologies : Pega
Testing Tools / : Selenium-BDD, Postman, Confluence, Jira, Zephyr, My-SQL, SQL-Server 2019 frameworks

Core Responsibilities:

- Lead a team of 20+ engineers through various releases.
- Provided level two incident and problem management support for 5 Enterprise applications.

- Supervision of daily Incident and Problem Management processes. Ensure issues are proactively managed to resolution, impacts mitigated, and root cause eliminated.
- Provided leadership and direction to the global support team as well as partner teams in infrastructure and development.
- Transitioned the team to Agile and improved the ticket resolution time by 20%
- 10% productivity improvement by defining and implementing, processes and best practices.
- Created technology-based pools, training freshers and mentoring resources that brought savings of 10% to the IT budget.
- Identified and managed complex issues, preventing escalations, where possible.
- Managed customer escalations and be IGI's point person for all initial reports and updates back to customer.
- Provided executive level visibility to operational performance, incident and outage, resources assigned.
- Managed project risks effectively.
- Identified challenges and proposed meaningful solutions.
- Responsible for recruitment and career development of resources
- Resource planning, effort estimation, cost estimation, task allocation and schedule management for testing assignments.
- Establish best practice policies, processes, templates, and tools to ensure system products meet high quality standards.

Organisation	IGI / HealthEC
Products	Population Health Management (PHM - Healthcare Product) / RCM (Revenue Cycle Management)
Tenure:	Jun'16 – Mar'20
Roles:	Delivery Manager, Test Architect (Agile Testing & Automation), Data Test Analyst

Product Description:

Population Health Management suite helps organizations improve patient outcomes, optimize quality of life and manage costs. Provides seamless integration of all data (Clinical, Financial, and utilization Data) across the care continuum.

Have integrated predictive analytics, utilization, and care coordination that automates provider and patient engagement, ensuring evidence based clinical practice. Supports pre-build of clinical quality measures to include, ACO, MU, HEDIS, PQRS, Etc., More precise identification and closure of care-gaps.

Technologies:	AngularJS, .NET, Java, WebSphere, MS SQL Server 2019, AWS
Testing Tools / frameworks	Selenium, Sauce Labs (BOTs Testing and Execution on Cloud), Docker, TestNG, Extend Reports, Maven, Jenkin, Jira, Bugzilla, POJO Class Implementation, JACKSON API

Core Responsibilities as Delivery Manager:

Projects: Care Manager, Beneficiary Management, Provider Directory, 3D Analytics, 3D eXpress

- Lead a team of 20+ engineers through various releases.
- Provided level two incident and problem management support for 5 Enterprise applications.
- Supervision of daily Incident and Problem Management processes. Ensure issues are proactively managed to resolution, impacts mitigated, and root cause eliminated.
- Provided leadership and direction to the global support team as well as partner teams in infrastructure and development.
- Transitioned the team to Agile and improved the ticket resolution time by 20%
- 10% productivity improvement by defining and implementing, processes and best practices.
- Created technology-based pools, training freshers and mentoring resources that brought savings of 10% to the IT budget.
- Identified and managed complex issues, preventing escalations, where possible.
- Managed customer escalations and be IGI's point person for all initial reports and updates back to customer.
- Provided executive level visibility to operational performance, incident and outage, resources assigned.
- Managed project risks effectively.
- Identified challenges and proposed meaningful solutions.
- Responsible for recruitment and career development of resources

Core Responsibilities as Test Architect (Agile Testing & Automation)

Projects: PHM Suite, Site Monitoring, Eagle Eye, RCM

- Defined the strategic direction for testing to improve quality standards across enterprise.
- Transitioned the team to Agile Testing implementing BDD and ATDD.
- Defined and established the DevOps pipeline for Continuous Testing.
- Enhanced DevOps processes to improve overall product quality and customer satisfaction.
- Drive enterprise-wide quality process initiatives and their implementation to ensure quality of deliverables.
- Architected and Designed the base automation framework for the core platform, to be used across enterprise applications. Enabled the implementation of the base automation framework.
- Architected and Designed the automation suites for enterprise applications using Selenium, TestNG, Extend Reports, Maven, Jenkin, Selenium Grid, integrating with Sauce Lab, Docker, TestLink, Bugzilla
- Evaluation of tools and automation frameworks
- Technical Leadership in the implementation of automation frameworks.
- Work closely with the Sales team in delivering product demos to prospective clients.
- SME for Software Testing Standards, methodologies, processes and tools.

Core Responsibilities as Data Test Analyst:

Projects: PHM Suite

- Define data acquisition for new features, analyse data and provide solutions for data testing
- Analyse raw data from customer, validate the data in the front end / various graphs.
- Test data generation for sensitive and private data

Responsibilities as Freelance Consultant cum Test Architect:

Clients : VDI Solutions (Singapore)
Tenure : Jun'14 – Jun'16

Responsibilities:

- Worked with executive leaders of VDI for Agile transformation. Established a remotely working testing unit and defined the organizational agile practices and processes.
- Strategized the testing processes of VDI with the aim to minimize testing cost in a remote and distributed manner.
- Analysed the scope for test automation and guided VDI on the test automation approach.
- Architected and designed the automation framework for VDI.
- Reviewed and guided the project teams to improve productivity and reduce run team costs.
- Support in recruitment of testing resources.
- Mentor and train resources on automation tools.

Organisation : Insigno Quipment Technologies
Products : Quipment BCT
Tenure: : Mar'12 – Apr'14
Roles: : Practice Head, Delivery Manager, Test Architect cum Test Manager

Core Responsibilities as Practice Head

- Worked with the executive leaders for Agile Transformation. Defined and implemented Organisation level standards, delivery processes, quality-standard gates.
- Established the testing unit of Insigno Quipment Technologies. Recruited and coached the team on the established Agile principles and processes for the Organisation.
- Ensured the defined standards and processes are adhered, and successfully delivered a global implementation of 12000+ units per year of Integrated Taximeter devices
- Identified candidates for Test Automation.

Core Responsibilities as Delivery Manager – Global Implementation

Projects: BCT, Taximeter [Embedded]

- Strategized region-wise implementation of the integrated Taximeter devices
- Planned, lead, managed and monitored the implementation of the integrated Taximeter devices in each region.
- Lead a team of 55+ engineers for global delivery.
- Drove roll-out planning and communications.

- Managed issues and risks.
- Tracked and reported region-wise release progress and escalate issues to executive leadership.
- Resource planning across regions
- Lead change management activities

Core Responsibilities as Test Architect

Projects: BCT, Taximeter [Embedded] , Boordcomputer.nl (Web / Mobile Application)

Testing Tools / : Squish, Telerik Automation, Selenium, Python, PostgreSQL, Jenkin, Maven, Xamarin with Visual Studio

- Architected and designed the automation framework for mass testing of integrated Taximeter devices.
- Technical guidance in the implementation of automation framework for BCT and Boordcomputer.nl
- Defined and designed the Embedded Testing approach for Taximeter.
- Provided Technical guidance in Embedded Testing for Taximeter
- Evaluation of testing tools and frameworks for automation and embedded testing
- Defined the System Integration Test Strategy for the above-mentioned systems, and prepared integration test cases.

Core Responsibilities as Test Manager

Projects: BCT, Taximeter [Embedded] , Boordcomputer.nl (Web / Mobile Application), QISS II, QFeedback (Mobile App), BCT (Embedded)

- Planned, managed and delivered the automation framework for the core platform and individual enterprise applications.
- Defined Automation and Manual Test Strategies
- People management of Test Engineers and Leads
- Trained and mentored the teams on Agile Testing and implemented Agile Testing in the projects
- Planned and defined the metrics and report on the quality of the product under test; decide on Go-NoGo for Releases
- Executed gamut of activities encompassing effort sizing, estimation and planning; defining the Test Strategy and Test Plans, identifying skill gaps within the team and preparing the training requirements for the team; risk identification, Task allocation, monitoring and controlling of test activities in India DC and review of test plan, test case documents
- Test case and Test management and migration of tests into standardized tools
- Release Management

Other Projects:

With Trimble Information Technologies Pvt. Ltd. Chennai, India

- GeoManager (Fleet Management) – US Client
- Taskforce (Mobile Application / Desktop) – US Client

With Tech Mahindra Ltd., NOIDA, India

- Work Manager Web Server
- Work Manager Field Gateway (Telecom Project) – UK Client
- TASKFORCE (Telecom Project) – UK Client
- Price Plex (Travel domain)

With NIIT Technologies Ltd. New Delhi, India

- GetThere Product (Travel Domain) – US Client
- Travelocity Product (Online Airline, Hotel, Car and Rail Reservation System - Travel Domain) – US Client

Personal Details

DOB : 05th July 1974
