

K.Selvamani

Mobile: +917338980398

Email: selvamanikaruppaiyan@gmail.com

Summary:

- 16+ years of diverse experience in STLC/SDLC on Agile & waterfall model in CMMI Level 5 product development organization with emphasis on Telecom products for Testing Carried out like Functional, Feature, Manual, Black box, Voice, VoIP, Signaling Testing, Automation, API, E2E, System Testing, Performance, Sanity testing, Regression testing, Security Testing, Gateway Testing, UAT testing & OSS Testing for NMS, EMS, FCAPS & OMS with GUI Client/Server based Applications for soft-switches and Networking products with mobile antenna calculation for LTE, 4G, CDMA1x, cells & Radio planning tools with GUI based testing on ATG framework.
- Hands on Experience in all phases of testing life cycle estimation, Test plan, Test case design, Test strategy, test execution, effort estimation, Resource allocation, tasks scheduling, risks identification, Mentoring team member, metrics collection and Defect tracking till closure.
- Add on Experience into E-commerce Retail domain form startup for BestBuy-USA project with testing in agile methodologies with weekly sprint. Hybrid role as Test Manager for an offshore and onshore delivery model handled team members of 16 peoples.
- Integration Modules of IDMS.COMQ.HPOP & TPOP In IBM main frame DB2 .Experience in Production environment to produce the DLS (Data Load Segment) for the final release to UAT in deployment for A1000 S12 TDM Exchange-Call engine.
- Gateways Testing done for GUI, CLI, TR64, AAA, TL1, TR69, CWMP configuration, Voice, WI-Fi, XMLCOM, SSH, PPP, ATM, VOIP & SIP.
- Hands on experience and knowledge in Alcatel products for Signaling System #7(SS7) testing and used organization probationary tools like HILTI, CHOPS, & DURMS to speed up the testing process.
- Good Knowledge in the Rational Clear Case tool to maintain configuration management system for code delivery.
- Automation of NGN Application SIP feature Test case using Intelligent Test Environment (ITE-8610), Voice Tool, EVA & Firebug for performance testing.
- Testing & installing from scratch the new Base for NMS Convergent Management Centre1300 (CMC) & Optical management system 1350(OMS) for Alcatel OSS products in UNIX server.
- Experienced in managing with Clients to maintain positive attitude and enthusiasm in high-pressure situations
- Extensively used tools like TMS, JIRA, Bugzilla, CMCS, Sub-Version (SVN) and Clear Quest for defect tracking and Test management.
- Responsible for Test design and development of test framework, test strategy, test cases required to test the functionality of the application & for automating the test cases
- Experienced in coordinating the team's training needs, work flow, support, issues, escalations & Interfaced with development teams for analyzing bugs, Test environment setup, simulation, AR handling & defect fixing.
- Expertise Members of the DR1-XPT Committee to carry out the Requirement Change Request (RCR) Analysis to ascertain the Impact and Effort.

PERSONAL STRENGTHS & Achievement's:

- Excellent Communication & in depth explanation.
- A self-starter & quick learner, easy adaptable to changing environments
- Professionalism and with positive work ethics
- Best Team Lead awarded from Program manager for best buy project
- Excellent appraisal rating got from Nokia Manager
- Chess winner Nokia 2016 & TT Runner Nokia 2015

Employment Details:

- UAT Lead Calsoft Pune, OCT-2022 -NOV 2022
- Senior Test Lead Orgware palavakkam Chennai, Jan 2017 -DEC 2020
- Test Manager -Test lead from FFI as contractor in TCS & external in Nokia networks Chennai, Dec 2014 -Sep2016
- Technical Lead-Test manager in WIPRO Technologies Chennai SEZ (Due diligence from ALU) , Jan 2010 -May 2014
- Senior software engineer with Alcatel-Lucent India Limited Feb 2004 -Dec 2009.
- Technical Assistant Engineer in Hindustan Tele printer LTD, Chennai, JUNE 2001 - DEC 2002.
- Production Assistant & QA Leader in OMNI Electronics Singapore - 555852, OCT 2000 - APR 2001.
- Service engineer in Mascot Marketing Enterprise Chennai, May 1999 - Sep 2000.

Professional Experience:

Calsoft

Project :-Vmware California

Description : Telco Cloud Operations is a holistic service assurance solution that allows CSPs, MSPs and large enterprises alike to monitor and manage their traditional physical infrastructure and new virtual networks as one. It enables them to rapidly resolve network performance issues and ensure consistent delivery of services.

Tools & Technique: -Jira, CMT, Sharepoint,Vmstar Prod & Test, Slack

Team Size:-6

Responsibilities:

- To work closely with key business team, PO, compliance, and operations stakeholders to ensure stakeholders participate in their required UAT deliverables & with Technology peers including Development Managers, Business Analysts, and QA staff to ensure requirements and scope are clearly understood prior to a UAT being initiated.
- Conduct UAT testing for business deliverables including solution demo, clearing and operational improvements
- Act as the central point of contact for all UAT processes responsibilities include publication of stakeholder opt-in/opt-out for each UAT, understand, and track UAT issues, and publish daily EOD test status.
- Execute run book as the main artifact used to track progress and communicate the required checkouts to stakeholders.
- Full ownership of UAT test environment, timing of code upgrades/deployments and UAT static data refreshes in-line with the support of overall testing efforts and planned testing schedule.

Orgware Technologies

Project:KDDI Japan

Tools & Technique: -LBS, GPS, Mobile

Skill Set: - UNIX & Linux, Basic JAVA, and Oracle 10G,

Team Size:-Team handling 15 people in a team size of 50

Responsibilities:

- Testing for 4ways taxis and auto in windows, ios and andriod application
- 4 ways GPS for LBS vehicles tested in Web and mobiles applications
- Collaborates and communicates with management, internal, and outsourced development partners regarding test status, project progress, and issue resolution.
- writes and executes complete testing plans, protocol, and documents for assigned portion of application
- Identifies and debugs, and creates solutions for issues with code and integration into software
- Analyze design and determines test scripts, and integration activities required based on general objectives and Design quality assurance and test process for subsystems of end user applications, system software running on local, Network-based platforms.
- Maintains documents of test results to assist in debugging and modification of software.
- Analyze test results to ensure existing functionality and recommends correction action

Nokia Networks

Client:Verizon-USA

Project: Base Processing tool (BPT) & TTPT (Chennai navallur)

Description:Base Station Almanac (BSA) data are cell sites' data managed by the mobile operator. BSA data are used by the Gateway Mobile Location Center (GMLC) for both handset-based (MS-B) and network-based (MS-A) positioning algorithms. The functionality required by VzW to create and manage **Translation Table processing Tool (TTPT)** , Sector table used by the Nokia Solutions and Networks CSCF, and the LTE Abbreviated Dialing Support table (GLS_LTE_ETN) and the CDMA Abbreviated Dialing Support table (GLS_3G1X_ETN), used by the Alcatel Lucent TAS GLS.

Tools & Technique:-LTE, 4G, CDMA1X, Mobile, QUALCOMM snap cell tool, QF automation & RNC, RAN ,NDBM ,NLS.

Skill Set: - Unix & Linux, Basic JAVA, (sqlplus),Jython .

Responsibilities:

- Individual contributor handling the BPT and TTPT applications for Radio planning tools in agile methodologies.
- 400 euro saved per iteration to region by automating for Verizon projects.
- Working on E-UTRAN data manipulation part for Calculating the algorithm to Generate MAR (Maximum antenna radius), TH & CC etc.
- Reporting to business head & Pre sales done for DU telecom Dubai project.
- Daily Meeting scheduled with computaris Romania development team to showcase the defect triage.
- QF test automation build from ground zero with robot framework.
- Automation of GUI test case for all the regression & performance test cases with QF (Quality first) licensed tool.
- Handled CR for MAR (distance to density, distance to neighbor cells), PRS muting & LTE repeater cell enhancement.
- RTM Test scripts preparations, Test effort estimation, Test case writing, & Test execution.
- Security vulnerability testing done for platform hardening updates.
- Participating from scoping with the Nokia Business architect -USA.
- Feature, Endurance, Stress testing, performance testing using JMX flight recorder & complete E2E testing carried out.

- Weekly status Sync up call with NSN-USA to show the progress of test execution & number of defects identified.
- Technical support given to CARE lab USA to reproduce the production defects.
- Additional responsibilities for Chennai Lab support in the installation of server for CMD & Teleco-cloud for Nokia Chennai using HP- ILO DL-380 servers.
- Internal certification done for IP-SI, Environmental, ethical business, information security & TL-9000.
- Documentation work done for AT, MOP & RN
- Quality SPOC for achieving CMMI-Level 3 for SI project.

Wipro Technologies

Client:-TECHNICOLOR Thomson- TCH

Project: Bug Burn down 10.4.x (BBD), ERDM (Ericson remote device management)

Role : Technical lead

Description : With an improved coverage and throughput compared to any 11b/g or 1x1 11n access point (from 54 to 65 Mbps), the Technicolor TG582n doubles the bandwidth and improves the link stability, coverage and coexistence with other access points in the neighborhood. Technicolor TG582n offers seamless connection of wired and wireless devices from anywhere in the home. The integrated modem supports ADSL and VDSL

Tools & Technique: -Clear Quest, Defect management, UPNP, Device Upgrade, X-Lite, VMware & SIPP tools Spirent Test center ,Ixia traffic generator .

Skill Set :- Unix & Linux ,JAVA

Team Size:-Team handling 5 people in a team size of 50

Responsibilities:

- Test effort estimation, and Scheduling Priority Tasks, Test plan, Test strategy, test design, environment setup, execution, defect tracking & resource allocation for individual task.
- Testing the gateway product in UPnP, DLNA, content sharing, Voice, AAA, VOIP, API,Wifi, GUI areas in Windows, Mobile & tablets for Android & IOS application.
- Performance testing carried out using fire bug to validate the Real time application behavior on IP cloud network
- Responsible for Custo testing for A1, Telmex for all maintenance release, Analyzing of ethereal trace, wire shark & Sip Message flow trace.
- Voice/VoIP call tested using 3G Dongle, & DSL link (SHDSL, VDSL & ADSL) in DSLAM.
- Preparation of status reports to the project management for the daily work progress in testing phase, PQZ & Traceability matrix release document for client.
- Played the role of technical lead in mentoring the new team members and providing technical support to speed up the activity, Appraisal activity & objective defined for each test team members
- Installation of the oracle VM manager, genie application & glassfish in Linux Red hat & Ubuntu server for Ericson Remote Back end portal setup to access the application on cloud, WAN & LAN network.
- Complete Testing of all GUI Application for BEP in different browser as per Specification
- Effort estimation, Defect tracking till closure, Client meeting for daily progress, PQZ, traceability matrix & 400 test case designed for the Bug Burn Down project
- Best practices & Lessons learnt are captured at the end of the project for future project references

Project's: BestBuy (Market Place) 24/7 Round the clock project

Client : BestBuy Minneapolis- USA

Role : Test Lead QA/Test manager

Description : BestBuy is one of the leading Retailers in US with more than 851 stores in US alone and several stores in Canada .It has major presence in the web shopping with its Online Store <http://www.bestbuy.com/> & KIOSK

Tools & Technique: - Test link, Jira, DDT, Share point, Selenium, IBM DEE (Data expert Editor) & SQL

Skill Set: - IBM, UNIX, SQL, Basic JAVA, and Selenium

Team Size:-Team handling 16 people in a team size of 70

Responsibilities:

- To estimate, plan and analyze requirements for each releases to the weekly Sprints for Agile model
- Reporting to VP, Initial startup with single team member and groomed up to 16 engineers.
- GUI Testing Done on OLS(online shopping) ,KIOSK & Express line developed on ATG framework
- Mobile application testing carried out with Android & IOS software
- Have expertise in Test Planning, Test strategy, Test Case Design, Test Execution and Defect Management
- Admin in Test case management tools like Test Link and good knowledge in defect cycle of bug tracking tool JIRA
- Managing with team strength of twelve people at offshore & four people at onsite as a Test lead/Test manager
- Understanding the scope of testing for the requested change and identifying the impacted environments
- Assign task to all Testing Team members and ensure that all of them have sufficient work allocated in the project
- Scheduling Daily status call with onsite US team to sync up the task which needs to be carried out & updating the daily - Weekly status report to the US client in program meeting.
- Ensured all possible test conditions are handled from Business and Technical documentation.
- Brain storming meeting for new feature scheduled & Table Review conducted for each test design prepared
- Appraisal activity carried out & objective defined for each test team members
- Worked closely with business people while logging & tracking defects in JIRA

Alcatel-Lucent Development India Pvt.-Ltd

COMPETENCIES:

Operating System: Windows 95/98/NT/XP, UNIX (Solaris), LINUX & IBM Mainframe

Scripting Languages: Jcl scripting, HILTI Macros, Perl (Basic only for SIP service use), UNIX Scripting and DOS programming

Utilities: Putty, Psftp, winscp

Configuration Management: Rational Clear Case & IBM main frame

Alcatel Proprietary Tools: IDMS, HILTI, Voice Tool, Amadeus, BIPSY, Hyconn, A8610/ITE Simulator

IBT300 (DSS1 PROTOCOL SIMULATOR) EVA (TRAFFIC GENERATOR), RAPTOR Advent Net and MIMIC

Simulators & Analyser's: Wire shark, ITE8610, Voice tool, IBT300 (PRA simulator), SIPP, X-Lite Soap UI

Defect reporting : IBM SOLAR, Clear Quest, Bugzilla, Jira, DDT

Data validation: IBM DEE (Data expert Editor), SQL Editor

Protocols: DSS1, ISUP, SIP, H.323, SNMP, DHCP, DNS, ARP, IPv4, NAT, PPP, IP-Sub netting, TR69, TR64, TL1, SOAP

1. Projects: OMS 1350 (Optical management system)

Client : Telecom- Italia

Role : Technical lead QA (Onsite coordination from Italy MILAN)

Description : Optical Management System (OMS) is an Optics Product of Alcatel.

1350-OMS 9.0 was distributing technology management into multiple domains. The preferable choice for the 1350OMS 9.1 is to have the converged ALU portfolio managed by a single domain application connecting directly the equipment's ("direct management")

Tools & Technique:-CLI, Bugzilla, IBM Mainframe & CHOPS

Skill Set:-UNIX, Mainframe, XML, and SOAP UI, Shell scripting

Team Size:-Team handling 5 people in a team size of 15

Responsibilities:

- Initial Project/Feature training given to the new engineering from the requirements documents
- Sync up with Link between Onshore counterpart and offshore delivery teams
- Daily status calls initiated with client to sync up and to bring clear vision on requirement handling
- Technical support given where ever necessary for the team
- Decoding the Soap message and converting it to CLI commands with XML interface.
- API Testing using Soap UI to convert GUI action to CLI commands
- Packet, SDM, Sonnet and WDM GUI interoperability was done with CLI action
- Appraisal activity & objective defined for each test team members
- Shell scripting done for command preparation
- Table review conducted to client for test design written from on shore

2. Projects: OSS –EMS-NMS CMC -1300 (Element Management System & Network Management System

Client : NGVISX1A, NRSX313, WIND

Role : Technical lead

Description: Convergent Management System CMC is a Network Management Product of Alcatel.

It manages Network Element like 1000-S12, 5020MGC, 7510TGW, Billing Server,

FortiGate, FortiAnalyzer, FortiManager, condor, conveda and different Network Element

Tools & Technique:-QTP, Wire shark, IBM Mainframe (To raise AR), Advent Net and MIMIC & DDT.

Skill Set:-UNIX, LINUX Red hat, JAVA, Mainframe, XML, and SOAP

Responsibilities:

- Responsible for Requirements gathering, Effort estimation, Change requests handling, Coding, Peer reviews, Customer problem simulation, solving and Fault Record verification for maintenance Projects with SLA adherence.
- Tech support for solving issues with the ALU client, RCR specific Test design preparation, Test execution and review form TLD
- Configuration Network Element Access and Configuration of the Communication Server
- Coding done using JAVA for SNMP mapping re-syncro rules
- GUI Based testing is performed wherever appropriate developed in the java & testing new Base for Convergent Management Centre
- Soap UI testing done for creation deletion of SO (Service order) to check the performance of the web services.
- Handling AR tickets for field issues as technical support team
- Involved as active Tester in Various RCR (Requirement development)
- Scratch Base installation of CMC server using UNIX HP rp3440 & HP rp4440 & Provisioning using V-LAN setup.
- Taking ethereal traces, FCAPS for NE & monitoring traps and alarms
- Involved in environment setup, simulation, test case execution for PSTN & NGN interoperability
- Executed Feature Test, Security Test & System Test, raised & managed defects using DDT tool
- Responsible for giving OJT to new engineers joining the team.
- Appraisal activity & objective defined for each test team members

3. Project's: Feature Testing / system testing, Deployment & administration for PSTN wire line Networks (Sep2007-Sep2009)
Client : PAM32N8 (MEXICO), ISRW4 (BEZEQ, ISRAEL), SA7LAS (TELSTRA, AUSTRALIA) EEP (RUSSIA), P22U6 (POLAND), TU74U9 (TRUKEY).

Role : Senior Software Engineer.

Tools & Technique: - IBM Mainframe, HILTI, Voice Tool, Amadeus, BIPSY, Hyconn, A8610/ITE Simulator IBT300 (DSS1 Protocol stimulator) EVA (Traffic generator) and RAPTOR

Responsibilities:

- Test Cases design and automation scripts done for execution in ITE- 8610 simulator
- Involved in environment setup, simulation, test case execution for PSTN networks
- Tested the Sam feature in IN for extension of 12 digits from 8 digit , call control & VAS functionality like CFU, CFNR, CFB, CW, CLIP, CLIR
- ISUP to Sip interworking testing carried using the simulator ITE-8610
- ATC test case preparation and execution using ITE for SIP & ISUP testing.
- Expert in Subscriber management , Routing, CDR generation & CAS/ CCS interlink setup between the new exchanges
- Responsible for OSS administration of new commands/parameter implementation, interface definition, command form adaptation & report layout handling
- Responsible for OSS/BSS software testing for Subscriber, PABX, Numbering, Charging ,Rating, Routing (L2/L3 configuration, Signaling & Speech Path) & Billing subsystems
- Tested the application compatibility with platforms Solaris UNIX and Linux

4. Project's: DLS production & integration testing of call-handling & non call handling data (Feb-2004-Sep-2007)

Client : MOD-2005, MOD2007, MOD2009, (Duestche Telecom, Germany) PAM32N4, ISRW1, PNG74.

Role : Senior Software Engineer.

Description : Alcatel is the world's leading supplier of telecommunication infrastructures. Alcatel's portfolio includes a full line of innovative products needed to build any type of communication network. ADI is one of Alcatel's design centers specializing in the development, testing and maintenance of Digital Switch - AS12 1000 Call Controller - 5020 & gateways.

Tools & Technique: - IBM Mainframe, IDMS, Rel-View, KCT, Cygwin

Responsibilities:

- As a production team member involved in the integration of all the modules & final DLS package delivered to ALU customer for volume roll out, Init & PR exchange's.
- Relation verification for COMQ(common questioner),Data validation & manual insertion of data into each tuple
- Responsible for Quality control check for the delivery items of each release & Web Page developed for the Team
- Responsible for Requirements gathering, Effort estimation, Change requests handling, Peer reviews, Customer problem simulation and Fault Record verification for maintenance Projects with SLA adherence
- Final member to deliver the DLS to field exchange for volume roll out.
- Process coach to check the quality of the product and to review the release note

5. Project's: AMADEUS -Announcement Package Production/Delivery

Client : ISRW4 (BEZEQ, Israel), MOD2007 (Duestche Telecom, Germany) &RUCIU5 (Russia), EEP, PAM32N4

Role : Technical Architect :- (Only two people across ALU has the testing knowledge of the tool DIAM)

Description : AMADEUS (Announcement Management and Development User System) is a Windows based GUI tool for easier Handling of Announcements in S12 Exchange. This includes replacement/modification/Addition of an Announcement, producing an Announcement Package and online updating of the same in the DIAM CE's of the Exchanges via RAPTOR (Remote Access for Packet Transfer and Online Replacement)

Tools & Technique:-Amadeus tool, IBM mainframe, Raptor, CHOPS & Bugzilla

Responsibilities:

- Involved in the complete Software Development Life Cycle (SDLC)
- Amadeus Tool Version control and final approval given to implement in field exchange
- Integrated Codec and Speech Quality Protocols G.711, G.729, A-Law, & u-Law
- Writing Test cases for the Requirements specification.
- Testing System Functionalities & End to End Testing
- UAT testing carried out to ensure that the requirements of a specification are met
- Working with System Support Team for deploying new Package
- Requirement Capturing, Subsystem Impact Analysis, effort estimation
- Design document preparation and Announcement Data Setup
- Production of Complete Package for offline Data Setup and Delta Package for online updating
- Delivery of DIAM Packages to Customer/Lab for the changed requirements
- Problem Simulation of Field issues related to both DIAM and AMADEUS tool
- Working with Multiple Releases and Products in each month

Hindustan Tele printer LTD, Central-Gov. Chennai

Projects : OSS product Testing, Integration testing and debugging of C-DOT Switches like SBM (Single Base Module), MAX-L, MAX-XL, RAX-256, RSU, Trunk Exchange, CCS-7, and CAS

Role : Technical Assistant Engineer

Responsibilities:

- Pressure Testing, Hardware testing (CE-control element) ,SBM(single base module), RAX-256(Remote Access exchange)& CM(Centre module) telecom products
- Configuration of complete exchange from scratch according to the vita list provided for each zonal
- Connecting 16 SBM (Single Base module exchange) to the CM (Central module) & defining routing for each exchange
- RSU setup, TGP & Route creation for the SBM Exchange.
- Announcement validation & to check the loads of the power cards

1. Customer : MIDAS Communication, Chennai (JUNE 2002 – DEC 2002)

Projects : Reliance SAX Project:-CORDECT (Digital enhanced cordless telephone system)

Role : Technical Assistant Engineer

Responsibilities:

- Linux OS installation for DIU (Digital subscriber unit) on field exchanges.
- Termination of E1 link from BSNL exchange to Reliance SAX exchange
- CBS (CORDECT Base system) installation within limited ranges for handshake with the BUIC (Base Unit interface card) antenna & Pairing of DECT CORDECT WLL (wireless local line loop) phone on customer support area .
- Acceptance testing done for reliance SAX (small automatic exchanges) exchanges.

OMNI ELECTRONICS Singapore – 555852

Client : HP (Hewlett Packard) HP Tiger plant

Role : Production Assistant & QA Leader

Responsibilities:

- Tracking of complete printer movement from the production plant using My-SQL oracle data.
- Feature testing carried out for HP printers like banner, cartridge, roller, Durability & keypad testing etc.
- Trained in PLC Movements Robotics for HP cartridge production
- Hands on experience on CAM Systems, Sensors, Surface Mount Technology (SMT), and Conveyors
- Testing and Trouble Shooting of HP Printers for various models
- Experience in highly automated plants Trained in quality assurance division
- Managing & Assisting people of 60 members in the plant to guide the step by step procedure
- Taking backup of data form oracle server and Status reporting to management for the daily progress

Mascot Marketing Enterprise Chennai

Role : Service engineer.

Responsibilities:

- Troubleshooting & assembling of automatic three phase changer in residential and industrial areas .
- Circuit component Designing ,PCB layout design & trouble shooting of Emergency lamp circuit for CFL & tubes
- Servicing & Installation done in residential & commercial area for three phase change

ACADEMICS:

B.E (E.C.E) from College of engineering Guindy-Anna University Chennai

D.E.C.E from Meenakshi Krishnan polytechnic-Pammal Chennai

H.S.E from St Thomas matriculation school-Chennai

S.S.L.C from kendriya vidyalaya –KV1 kalpakkam

Additional certification:

ADCHN:-Advanced diploma course in Hardware and networking –SISI institute Guindy

PDU Certified from Grey campus-PMI

PERSONAL DETAILS:

- | | |
|----------------------------|------------------------|
| • Father's Name: | Mr. M Karuppaiyan |
| • Sex: | Male |
| • Date of Birth: | 10/03/1979 |
