- Creating, Enhancing, debugging and Running Test Cases
- Writing Golang scripts for metric processing
- Utilizing AWS SQS messaging

NetFoundry is a software-defined networking (SDN) Product that provides solutions for building and managing secure and high-performance networks.

Application focuses on enabling businesses to create and manage application-specific, cloud-native networks without the need for dedicated physical infrastructure provides Zero Trust Networking, Cloud-Native Connectivity, Security and Encryption

1. Engagement : MOP - NetFoundry

Client : NetFoundry

Duration : Jun-2019 to till Date

Environment : Cypress, Selenium, CI/CD, AWS, Core Java, JavaScript, Golang, ELK

Management and Orchestration Platform (MOP):

NetFoundry, as a product, involves a substantial flow of data across data centers, routers, and fabric. NetFoundry provides zero trust, application-specific networking for the new application world. WAN/SASE/ZTNA islands are insufficient because the WAN is no longer the center of the application universe - applications are interdependent, distributed and dynamic

2. Engagement : Ziti-Metrics-Processor - NetFoundry

Client : NetFoundry

Duration : Jun-2021 to till Date

Ziti-Metrics-Processor (ZMP):

NetFoundry, as a product, involves a substantial flow of data across data centers, routers, and fabric. To log and structure this data, we employ the Ziti-Metrics-Processor (ZMP). Ziti-Metrics-Processor is an internal project wherein fabric, routers, identities, and nodes generate raw data. Through this module, we access the raw data, perform data enrichment, and route it to the AWS Simple Queue Service.

3. Engagement : Elastalert - NetFoundry

Client : NetFoundry
Duration : April-2019 to May 2021

Elastalert:

ElastAlert is designed to manage alerts for internal, support, and end-users in cases of limit exceedance, low traffic limits, and high volume of usage. Various alerts are configured programmatically to monitor all nodes, triggering notifications for both upward and downward trends. ElastAlert is built on the ELK stack, where 'E' stands for Elasticsearch, 'L' stands for Logstash, and 'K' stands for Kibana. The alerts are configured in YAML files and run on an independent server, notifying users of any issues in the system through email, ping, and common communication channels. Based on these alerts, end-users can take appropriate action.

Previous Company: Virtusa Pvt Limited

Duration : March-2014 To April 2019

4. Engagement : UKBS SAAS Online CIT

Client : British Telecom
Role : Associate Constant
Duration : Mar-2017 to Apr 2019
Environment : Jenkins, Windows Server, Java, TestiNG, Junit , SpringBoot, Go-Server
Selenium Webdriver Java, Cucumber, Maven, TestNG MongoDB

Description:

Telecom is world's largest Telecom Network provider; Customer can place an order for different products that need to track and verified. This project involved with CIT Automation testing with Selenium for Network Products and order tracking system of BT client.
