Product Testing

Product #1

Project Title: Rhythm

Product Type: People Management Tool (Maintains Organization and Employee data)

Testing: Manual & Automation

Team Strength: 2

Bug Reporting Tool: JIRA

Description:

Rhythm is an in-house product developed for updating, maintaining, and analyzing company data. It is a management tool where senior level executives can analyze each activity happening within their vertical and across the organization. It also gives a graphical representation of some of the selected data. We can also export the billing reports and reports of employee time utilization on a monthly, weekly, and yearly basis.

Product #2

Project Title: Inovus: Analyze

Product Type: Analytics Tool

Testing: Manual & Automation

Team Strength: 4

Bug Reporting Tool: JIRA

Description:

Inovus Analyze is an interactive web-based solution for multidimensional analysis. The application enables a wide range of digital marketers to easily and efficiently mine actionable information from their data. Publishers, networks, agencies, marketers, and other stakeholders save hours of work using automated creation and delivery of reports. Through the development of comprehensive and flexible dashboards, the stakeholders can conveniently download the analysis reports within a matter of seconds.

Product #3

Project Title: Screen Bot

Product Type: Screen Shot Tool

Testing: Manual

Team Strength: 2

Bug Reporting Tool: JIRA

Description:

Screenbot is an in-house product Ad operations team that publishes display advertisements on publisher websites daily. As proof to the end clients, the team must provide screenshots of published advertisements on their websites. This task becomes tedious when there are numerous requests in the pipeline. To make ad operations specialists lives easier.

Product #4

Project Title: Unity

Product Type: Gaming Ads

Testing Methodology: Manual

Team Strength: 4

Bug Reporting Tool: JIRA

Description:

Unity is a gaming website. We had built a tool to check the violence of the ads which are displayed between the games. Used Postman application for testing API by sending request to the web server and getting the response back.
