- Published project in International Conference on Institute for educational research and publication(IFERP)[Link]

PROJECTS

- Enhanced classification of ensemble model for hate speech sentiment analysis[Link]

Deep learning models | Natural language processing

- This project aims to contribute to online safety by providing a powerful tool for monitoring and mitigating harmful content on social media platforms..

- Real-Time sentiment prediction of parliamentary election results by analyzing social media [[Link]

Deep learning models | Natural language processing | Topic Modeling | Geo spatial Modeling

- Real time data access and deploying predictive models. This framework will provide insights into regional and overall sentiment trends to forecast election accurately.

- Employee Payroll Management [Link]

Python | Mongo DB

- The main aim of this project is to optimize payroll processes and ensure accurate record-keeping. Integrated MongoDB for seamless data management, enhancing system reliability and performance.

DECLARATION
