Recent Projects

1. CPR – Patient Advocate Foundation (PAF) (SEP-2022 TO JULY 2023)

Technologies: Core Java, Selenium, Data Driven Frame Work, J meter

The PAF Co-Pay Relief Program, one of the self-contained divisions of PAF, provides direct financial assistance to insured patients who meet certain qualifications to help them pay for the prescriptions and/or treatments they need. This assistance helps patients afford the out-of-pocket costs for these items that their insurance companies require. The program offers many sophisticated online tools to ensure the application process is as streamlined as possible for patients, providers, and pharmacy representatives, including 24-hour web-based portals, electronic signature, document upload, and bar code fax routing capabilities. Co-Pay Relief patient assistance is purely donor-funded and money is dispersed to qualified patients while funds are available for each of the Diseases identified.

Contribution:

- Analyzing the user requirements.
- Test case Design and Execute.
- Created Hybrid Framework with selenium web driver using TestNG.
- Preparing Automation Test scripts and Manipulating data Driven and Hybrid Framework.
- Enhancing and debugging Selenium test scripts
